THE LIGHT BULB MAFIA POSTSCRIPT:

WHY EYE CHECKUPS ARE BLINDING YOU

NOTE: This book is primarily designed for the Internet. To activate any blue hyperlink references in this document, the computer must first be connected to the Internet online. To activate a *hyperlink* in a Word document, hold the CTRL key, then simultaneously move the cursor over the blue *hyperlink* and left-click mouse. This document, although published separately, is a *POSTSCRIPT* to the author's much more extensive previous book, *THE LIGHT BULB MAFIA:* http://users.skynet.be/fc298377/Sun/THE_Light_Bulb_Mafia.pdf / http://www.genuinechristianitynow.com/tag/the-light-bulb-mafia/ / http://thecontrail.com/forum/topics/new-book-the-light-bulb-mafia?id=4744723%3ATopic%sA549822&page=2 / https://drive.google.com/file/d/0BxPvvz0IDrtTS3ozendvcWczb2IxNVlCbzBGN2pkWTRiSmo0/view?pref=2&pli=1

In the author's recent book, *The Light Bulb Mafia*, published in July 2014, he comprehensively explained why modern LED, OLED and LD lighting technology – if not radically changed – was going to curse the whole world with blindness in the future. In chapter 17, '*Eye Check-ups, Ophthalmologists, and LED Retinal Light Damage*, a brief look at slit lamp and ophthalmoscope bulbs (fitted to equipment used by virtually all doctors for eye check-ups) was taken. But at that time the author could not gain access to the precise *technical specifications* of the new LEDs being fitted. Since then, this critical information has now become available and is very much *worse* than he could have ever imagined or predicted.

Yet virtually all leading global ophthalmological equipment manufacturers and most eye specialists are increasingly using these new LEDs in their equipment, which direct enormous, dangerous levels of light, especially blue light, into the eye severely damaging it. So no thanks to the world scientific and medical community, who by and large are doing absolutely nothing about it, the author thought he would write this short *POSTSCRIPT* to better help others understand how seriously damaging LEDs are to people's eyes – especially when fitted to new ophthalmological equipment, slit lamps and ophthalmoscopes – used by all eye doctors throughout the world, who are, it seems, disgracefully now more focussed on making money, than on genuinely caring for the best interests and health of their patients.

CHAPTER ONE

EYE EXAMINATION AND CHECKUPS

An eye examination or check-up is a series of tests performed by an ophthalmologist (eye specialist medical doctor), optometrist, or orthoptist to assess a person's vision and eye health.

The standard eye examination usually consists of an external examination followed by an eye muscle test, visual acuity test, refraction assessment test, visual field test (perimetry), colour vision test, **ophthalmoscope or slit lamp examination**, and a tonometry test screening for glaucoma. The slit lamp examination is the most extensive one and is usually central to all regular eye check-ups carried out by eye specialist professionals worldwide.

Slit lamp examination

Diseases of the eye can be difficult to diagnose during a regular physical examination. Because of this, medical eye specialists (ophthalmologists) are better able to more accurately examine and diagnose these conditions using a specialist piece of equipment called a slit lamp instrument.

When you have a full eye check-up, you will likely undergo a slit lamp examination.

Today, a slit lamp examination is routinely done as part of regular eye check-ups that can aid in diagnosing many serious eye problems at an early stage such as macular degeneration, detached retina, cataracts, blockages of the retinal vessel and many other eye diseases.

A slit lamp is a lower power binocular microscope combined with a high-intensity light source that can be focused to shine an adjustable, thin beam of intense light into the eye. It is used for much the same reasons as an ophthalmoscope, but is usually much more powerful and precise. Often a patient will sit in a chair and be asked to rest the chin and forehead on a support to keep the head steady while the health care provider or doctor will examine the eyes.

Often a yellow dye (fluorescein) is used to help examine the cornea and tear layer. The dye is either added as a drop, or the doctor may touch a fine strip of paper stained with the dye to the white of the eye to achieve the same result. Next, drops may be placed in the eye to widen (dilate) your pupils, so that after a short waiting period the back of the eye can be examined unnaturally illuminated by the high intensity light of the slit lamp. Ophthalmologists call this procedure biomicroscopy.

During this examination, cycloplegics such as Astropine (drugs that ophthalmologists use to paralyze the cillary muscle temporarily to cause the pupil to dilate) are used to allow more high intensity bright light to enter the interior of the eye to give a better and sharper view. Mydriatics are drugs that are used just to dilate the pupil, such as Cycopentolate.

The use of these drugs has become commonplace, yet their toxicity and adverse health effects have been known and criticized for many years. http://www.myopia.org/dilatingdrugs.htm Because of this, a few ophthalmologists prefer to use a device called a scanning laser ophthalmoscope to examine the retina without dilating the pupil.

Mandatory vision screening and eye examinations

Currently, worldwide, there is a rapidly growing trend, promoted by the medical profession, for tyrannical governments and states to introduce mandatory (required by law or mandate, compulsory) vaccinations and eye check-ups for people to obtain such things as driver's licences, or to get a job in a hospital or for teachers or children to even attend school. With the revolution in switching to LED slit lamp illumination, and the fact the blue light toxicity emissions from LEDs severely damage the "white eyes" of children so much, with mandatory compliance increasing as it is , this is going to be utterly catastrophic for families, young infants and school children in the future.
http://www.theglobeandmail.com/opinion/should-eye-exams-be-mandatory-for-school-age-kids/article26378845/

For example, here is the State-by-State list of vision screening requirements for school children in the United States. Note that in some US states vision screening and eye examinations are now compulsory already:
http://www.aapos.org/resources/state_by_state_vision_screening_requirements/

Over 90 percent of ophthalmologists in the United States and over 7,000 abroad are members of the American Academy of Ophthalmology (AAO) which indirectly sets the standards and guidelines for government vision screening and comprehensive ophthalmic examinations of infants and school children through to the age of 18 years. Here are the guidelines: https://www.guideline.gov/content.aspx?id=39257 or Google-search: "Pediatric Eye Evaluations PPP – 2012 - American Academy of Ophthalmology."

So unless a gargantuan change soon takes place to reverse the rapid introduction of LEDs for slit lamp and ophthalmoscope illumination, exacerbated by the sharp trend towards compulsory/mandatory vision screening and eye examination requirements for school children – a whole new global generation is probably going to be largely permanently blinded.

The following chapters will explain why.

CHAPTER TWO

HISTORY OF SLIT LAMPS & OPHTHALMOSCOPES

The slit lamp today is an instrument which has gradually been developed over more than 150-years after the German physician and physicist, Hermann von Helmholz (1821-1894) first invented the ophthalmoscope in 1850 - 1851. Today the largest German association of research institutions, the Helmholtz Association, is named after him. It is headquartered in Bonn and Berlin, has an annual budget of 3.95 billion euros and has 37,148 employees.

Today's slit lamp instrument is a combination of two instruments, the corneal microscope and the slit lamp itself.

The slit lamp instrument consists of a high-intensity light source that can be focused to shine a thin sheet of light into the eye and in conjunction with a bio-microscope attached to it (and sometimes a camera) the lamp facilitates an examination of the anterior segment and posterior segment of the human eye. The slit lamp provides a three-dimensional view of the eye. While a slit lamp is used to examine the structures in the front part of the eye, such as the cornea, iris and vitreous gel, it is also regularly used by ophthalmologists to examine the optic nerve and retina which are located at the back of the eye.

When structures in the back of the eye such as the retina or optic nerve are checked, the ophthalmologist or optometrist will typically administer eye drops to unnaturally dilate the pupils. It takes about 15-minutes for the eyes to dilate, before the back of the eye can be properly illuminated by shining the high-intensity light into it to allow it to be examined.

This light source is so intense (even with the old halogen bulbs used for illumination, and before their recent replacement with more powerful halogens and LEDs), that it is common for the eyes to remain sensitive to light for a few hours after being dilated for the procedure. After the examination, often ophthalmologists will recommend that sunglasses should be worn outside and advise that patients may want to arrange for someone else to drive them home since their vision may temporarily be adversely affected.

Slit lamp light bulb history

Various old primitive, carbon, bamboo and cellulose filament lamps were first used in the late 1800s to provide slit lamp illumination but their reddish colour temperature and brightness was considered very poor, under 100,000 lux.

Then in the early 1900s up to about 1919, Nernst glower lamps, developed by the German physicist and chemist Walther Nernst in 1897 were regularly used. But their efficacy still

wasn't considered satisfactory, as they were considered very inefficient and the ceramic rod (which acted like a filament) was not electrically conductive at room temperature so the lamps needed a separate heater filament to heat the ceramic hot enough to begin conducting electricity on its own.

After tungsten filament incandescent light bulbs were first invented in 1904, which were much more compact, efficient, brighter and whiter, the Nernst lamps were gradually replaced by these. Tungsten filament incandescent lamps were later fitted to slit lamps from 1919 onwards and remained to be used up to 1976.

Although the first lamp to use halogen gas (chlorine) was patented as far back as 1882, it wasn't until 1959 that the first halogen lamps were commercially patented and manufactured by General Electric.

Following this, between 1976 and 1994, these brighter halogen bulbs were fitted to slit lamps (100,000 – 200,000 lux) and gradually replaced the older standard tungsten filament incandescent bulbs. These halogen bulbs were the standard illumination source for slit lamps for about 35-years from 1976 to 2010, when they gradually began to be replaced by much more powerful, high output LEDs. The first LEDs fitted to slit lamps were by the Swiss ophthalmological equipment manufacturer Haag-Streit Holding AG in 2010.

Presently, most slit lamp manufacturers in the world now fit LED illumination as standard to their slit lamps and ophthalmoscopes (and other surgical equipment as well).

While now, in 2016, a lot of older slit lamps being used still have halogen bulbs fitted, this position is quickly changing as most are either being retrofitted with more powerful halogen bulbs or the popular, newer, and even more powerful LEDs. As technology changes, a lot of eye specialists now are simply choosing to purchase entirely new "hi-tech" equipment with the more powerful, longer lasting and energy efficient LEDs as the standard fitment.

This radical change is entirely revolutionary, profound and far-reaching – because the luminous intensity and damaging blue light wave length toxicity of these new high output LED bulbs now is enormously increased with up to five to ten times more illuminance intensity than the older, increasingly obsolete halogen bulbs presently being quickly phased out.

CHAPTER THREE

LED SLIT LAMP BULB INTENSITY: WHY IT IS SO DAMAGING

A good illustration of the massive power of these new LED bulbs can be made by comparing them to the illuminance power of the sun. Direct sunlight from the sun has a luminous efficacy of approximately 93 lumens per watt of radiant flux. Direct sunlight at the earth's surface when the sun is at its zenith is about 1050W/m². Multiplying this figure of 1050 watts per square metre by 93 lumens per watt means that bright sunlight provides an illuminance of about 98,000 lux (lumens per square metre) on a perpendicular surface at sea level at noon on a mid-summer day, at the brightest latitudes. The maximum illuminance from the sun on earth at the brightest day at noon in mid-summer at the brightest latitudes, is considered to average no more than about 120,000 lux by most optical scientists, although slightly higher readings have been recorded.
https://en.wikipedia.org/wiki/Sunlight https://en.wikipedia.org/wiki/Daylight

From 1976 onwards, for about 35-years up to about 2010, the most common illumination lamp used in most manufacturer's slit lamps was the Osram #64250 (FHE/ESB) Microscope HLX Halogen 6 volt 20 watt halogen bulb. This lamp produces exactly 480 lumens of light, and depending on the brand and the type of slit lamp it is fitted to, it produces about 200,000 lux. This is about *twice* the maximum illuminance radiation of the sun. Because of this, most slit lamp and ophthalmoscope manufacturers over many years have included an extensive WARNING & CAUTION NOTICE about the dangers of this intensity of the light directed into the patient's eyes in their Operating Instructions when they sell their new equipment to doctors.

While most physicians *underplay* the potential damage that can occur through slit lamp and ophthalmoscope examinations, (and never mention it to their patients), many manufacturers do not. Here is an example of an ophthalmoscope made by a relatively well-known and reputable manufacturer, Welch Allyn, Inc. www.medicalsupply.gr/dat/C29454C1/file.pdf called a 'PanOptic Ophthalmoscope.' The "*Warnings and Cautions*" are included in the *Operating Instruction Manual*. The "Warnings and Cautions" are extensive. Here is but one:

"CAUTION: Spectrally weighted photochemical radiance Lb and La give a measure of the potential hazard that exists for a beam of light to cause photochemical damage to the retina. Lb gives the measure for the eyes in which the crystalline lens has been removed [aphakes] and has not been replaced by a UV-blocking lens, or for the eyes of very young children."

Manufacturers are well aware that the intense light projected by their equipment may be very dangerous to patient's eyes, especially to the retina and the eyes of very young children.

However, if these old halogen lamps were considered damaging enough, after 2010, gradually a radical change began to take place throughout the world as much more highly powered LED bulbs were introduced to the market. From around this time, all slit lamp and ophthalmoscope manufacturers began to phase out these old halogen bulbs and either replace them with much more powerful halogen lamps, or in most cases, replace them with high performance LEDs. This radical change was profound, because it massively increased the maximum intensity of the halogen bulbs from around 200,000 lux, up to over 1,000,000 lux in the LEDs.

In simple terms, this means that some of these new LEDs are now up to *ten times* more intense than the maximum illuminance from the sun striking the earth.

Virtually all slit lamp and ophthalmoscope manufacturers are now incorporating these massively powerful LEDs (and to a much lesser extent more powerful halogens) into their equipment, and as far as this author is aware at the time of writing, not one single professor of ophthalmology, medical doctor, optician, ophthalmologist, eye specialist, or scientist in the world has uttered even a squeak of concern about this outrageous practice and innovation.

For decades, most parents, teachers and doctors have drilled into us from childhood, correctly, that we should not directly look into the sun, even during a full or partial eclipse without extra protection. Bear in mind this is not at a million lux which some LEDs in slit lamps now generate, it is only at the maximum illumination level of the sun at 120,000 lux or less!

Medical specialists, scientists and doctors for decades have told us, correctly, that if we do look directly at the sun, we could go blind or severely damage our eyes. It isn't the heat of the sun that does the damage. It is the light. So why is the global medical community, en masse, all of a sudden, now approving of such a radical medical procedure that is now, on a regular basis, scandalously blasting up to ten times the maximum illumination level of the sun directly into their patient's eyes who have regular eye examinations and check-ups? This breath-taking, astonishing, gross negligence by the medical profession is an utter disgrace.

What is so alarming is the fact that when someone is looking at the sun, even during a total eclipse, they will usually not even know they are seriously damaging their eyes. Depending on the intensity and length of exposure, the damage can last for days, weeks, months or be permanent. The most painful, short-term, immediate outcome from looking directly at the sun is called corneal sunburn (photokeratitis) or when it affects the retina it is called solar retinopathy. But this illumination from the sun is very mild compared to that of slit lamp LEDs.

It is now well known that long-term sun exposure from UVB (280nm-314nm), UVA (315nm-380nm) and NEAR BLUE/VIOLET/BLUE LIGHT (381nm-500nm) causes serious permanent eye damage. [A nanometre (nm) is one billionth of a metre]. Excessive UVA and UVB toxicity generally is more often linked to causing skin cancers and cataracts, and excessive NEAR BLUE LIGHT (VIOLET) – BLUE LIGHT (381nm-500nm) toxicity is now linked to gradually damaging

the retina causing age-related macular degeneration and other more serious eye problems which eventually often lead to permanent blindness. Until recent times, this has occurred largely only very gradually from the relatively low ambient radiation from the sun at a maximum illumination of 120,000 lux – not from any damage incurred by modern LED lighting, or the massively powerful LEDs now being fitted to slit lamps and ophthalmoscopes.

This means that over the period from 1919 to 1976, the illuminance level of slit lamps and ophthalmoscopes, increased from well under 120,000 lux with old incandescent bulbs (about the maximum level normally recorded from the sun) to about 200,000 lux (twice the maximum level of the sun) between 1976 and 2010 using halogen bulbs. But from 2010 up to 2016, in only 6-years, the illumination power has been massively increased to over 1,000,000 lux. That is one million lux! This is the equivalent now of someone looking directly into a light source more than TEN TIMES MORE POWERFUL than the illuminance of the sun! Even a kindergarten child's common sense alone, would be enough to warn it such massive illumination is hurtful and dangerous. Yet not so with highly educated doctors.

To appreciate how incredibly bright and damaging this slit lamp light intensity really is consider this: The full moon on a clear night is only about .25 lux. Computer monitor screens vary between about 75 to 500 lux. Most office lighting today is designed to be rated at about 320-500 lux. A very brightly lit office is normally considered to be about 400 lux. The average family living room lighting is usually rated at around 50 lux.

Bicycle head lights are usually rated at around 35 lux to 100 lux for super bright ones, depending on the illuminated distance measured, angle and colour temperature of the light. The sun's maximum illuminance throughout the year in most places is normally around 100,000 lux. Therefore the damage being incurred by these new, massive illumination levels from LED slit lamps and ophthalmoscopes with most operating between 600,000 lux to 1,000,000 lux now is simply enormous.

You don't have to be a highly trained optical scientist or eye doctor, or to spend years and years of study at university, to prove or understand how incredibly damaging this immense level of light really is – or appreciate how it is soon going to destroy people's retinas. If patients knew the full specifics about this massive intensity of light being shined into their eyes during eye examinations, even their ordinary common sense, in many cases, would immediately question the procedure.

Blue light hazard and toxicity: What it does to the retina

Our eyes are not designed to handle large amounts of blue light such as that emitted by LEDs. As the result, the twin effects of fuzzy focus and light scatter makes intense blue light from a source like an LED to spread out across the retina affecting the entire visual field. When there is a strong spike of blue light, as there is from LEDs, we strain our eye muscles and squint trying to pull the blue into sharper focus.

The human eye has a strong aversion reaction to bright blue light sources, including all bluish-white light – and pupillary reflex is down in the blue part of the spectrum which signals to the muscles in the iris causing it to close. Our body's instinctive reaction is to reduce blue light entering the eye by closing down the pupil. This means that blue light not only spoils our night vision, any intense blue light can cause long-term photochemical damage to the retina.

When normal bright light hits a photoreceptor, the cell bleaches and becomes useless until it has recovered through a metabolic process called the 'visual cycle.' However, in experiments with rodent models, when blue light strikes the photoreceptors it is absorbed causing a reversal of the process, when the cell becomes unbleached and responsive again to light before it is ready. This then greatly increases the potential for oxidative damage, which leads to a build-up of lipofuscin in the retinal pigment epithelium (RPE) layer. Drusen deposits are then formed from excessive amounts of lipofuscin, hindering the RPE in its ability to provide nutrients to the photoreceptors, which then wither and die.

In addition, what makes matters worse, if the lipofuscin absorbs blue light in high quantities over an extended period or at very high intensity such as exposure to LEDs, it become phototoxic, which can lead to further oxidative damage to the RPE massively accelerating further cell death (apoptosis).

Correct portions of blue light indeed are an important element in "natural lighting" and strongly contribute to general human health. But it is now well proven that excessive amounts of artificial blue light are extremely toxic to cellular structures, test animals and human foetal retinas. To use bulbs as powerful as high output LEDs now at between about 600,000 lux to over a 1,000,000 lux, with such a terribly high composition of excessive blue light in their spectral emissions for ophthalmological use in instruments like slit lamps or ophthalmoscopes is absolutely scandalous.

In fact, it is much more than that. It is grossly negligent and criminal. Yet almost every eye specialist in the world is beginning to adopt this appalling practice by using this dangerous equipment while they carry out routine eye check-ups and examinations on their patients. What makes LEDs so incredibly insidious, deceptive and deadly, is the fact that when their enormous blue light toxicity damages the retina, in many cases, it will happen only very gradually at first, without most patients or the general public at large ever even knowing that they are being permanently blinded because there is less heat generated in this wavelength.

Researchers have long proven excessive blue light from LEDs, even at low intensity, damages the retina. <u>The evidence now is simply overwhelming</u>. Here are just a few references of many available on the Internet: TAIWAN STUDY: "White Light-Emitting Diodes (LEDs) at Domestic Lighting Levels and Retinal Injury in a Rat Model (2014)" http://ehp.niehs.nih.gov/1307294/ https://www.youtube.com/watch?v=VfCmL4Kz2iw http://www.pureenergyblog.com/2013/0513/1133/8502311_led-lights-ruin-retinas-researchers-say/ https://www.youtube.com/watch?v=mVZ5n2HGoJ4 http://www.naturalnews.com/049489_iPhone_eye_damage_blindness.html

CHAPTER FOUR

WHERE IS THE PROOF LED SLIT LAMP ILLUMINATION IS SO POWERFUL?

The manufacturers provide the evidence themselves. However, in most cases, it is extremely difficult to find. Usually they deliberately omit it in the specifications of their products. This is because they know if too many people including doctors were to be properly informed about exactly what power level of illuminance and blue light toxicity that their LEDs produce, people may become suspicious and nobody would buy their products. In most cases, slit lamp and ophthalmoscope manufacturers will just state the "*type"* of bulb used for illumination with a general description, but not its *precise power and illumination* rating in either lumens or lux. Just stating the *type* of bulb in their description without its power and illumination rating in lumens and lux is simply meaningless, and they know it.

Most doctors, ophthalmologists, opticians and eye specialists therefore negligently buy their products without ever knowing or checking what the true illuminance power level rating really is. This fact alone is scandalous and inexcusable.

Can you imagine a professional eye specialist or eye doctor, after having spent many years at university studying eye biology (and in the process learning more than most people about how dangerous excessive bright light and toxic blue light to the retina really is) – buying such delicate equipment without ever even checking what the illumination, colour temperature, type of spectral irradiance and power of the illumination source of the instrument actually is? Yet virtually every doctor and eye specialist in the world is doing just this right now.

All light at different frequencies and power can be incredibly toxic and damaging under certain circumstances. The illumination source in slit lamps and ophthalmoscopes is an integral part of the instrument. The gross negligence involved in not checking this fundamental specification is simply disgraceful. It is the equivalent of a general physician buying a drug and then prescribing it to a patient without first checking exactly what the drug actually is, the recommended dose required, its potential adverse health effects on the patient, and the precise specifications of it and its true efficacy. It is like a person buying a car without checking out what sort of engine it has first. Whether it is petrol, diesel or electric and how powerful the engine is – whether it is a four-cylinder, six cylinder or big V8. The power specification of the light source and illumination level of a slit lamp or ophthalmoscope is absolutely vital in regards to the health of the patient. It is the most important part of the instrument by far both in terms of the doctor's visual needs and the safety of the patient. Yet appallingly, doctors are doing absolutely nothing about it. Nothing.

There are many leading manufacturers of slit lamps and ophthalmoscopes throughout the world, such as Haag Streit, Carl Zeiss Meditec Inc., Keeler Instruments Inc., Kowa Optimed Inc., Lumenis Vision, Marco, Nidek Inc., Oculus Inc., Reichert Technologies, Topcon Medical Systems, Trevi Technology Inc. and iBEX.com, to name but a few. To keep this account as brief as possible, it's simply not possible to properly deal with all of them. However, two of the foremost examples of these leading manufacturers and their products will be used. Most of the LEDs used by these two leading manufacturers now are very similar to all the others.

EXAMPLE #1: Haag-Streit Holding AG = Haag-Streit LED Slit lamps
http://www.haag-streit-holding.com/

Haag-Streit Holding AG is one of the oldest, and is arguably the most reputable and prestigious slit lamp manufacturer in the world. The company was founded in Bern, Switzerland, in 1858, by Friedrich Hermann and Hermann Studer making precision instruments. After a change of location the company in 1876 began to develop and manufacture instruments for ophthalmology. After various changes of ownership, the company was given the name *Haag-Streit*. Today it has about 1,000 employees with a turnover of US$200-300 million and its headquarters are at Koniz, Bern, Switzerland.

The Haag-Streit Holding group structure includes about twenty-one subsidiary companies with Haag-Streit Diagnostics or Haag-Streit Surgical being the main providers of instruments and medical-practice equipment for ophthalmologists and opticians. For more than 50 years the Haag-Streit slit lamp has been regarded as the standard instrument for ophthalmic diagnosis – in the world!

Today Haag-Streit Holding AG has only four shareholders and the Chairman and CEO is Walter Inabnit. He also serves on the Advisory Board of the private equity BV Group AG, listed on the Bern Stock Exchange. BV Group AG was founded in 1997 under the name BERN-VENTURE LIMITED based in Tortola in the British Virgin Islands [British tax haven] and later in 2001 the company was listed as a stock corporation under Swiss law with headquarters in Bern when it was renamed BV Holding AG. The company generally targets medical related companies' financing. The major shareholder is Willy Michel, a wealthy Swiss entrepreneur of medical devices. He is the owner of several companies involved with art, the watch industry, catering, pharmaceuticals and hotels. In 2012, the *Business Magazine* estimated his assets at 750 million Swiss francs.

Question: Haag-Streit is now a big company controlled by only four shareholders, with its Chairman and CEO, Walter Inabnit, directly involved in BV Group AG, a big, private equity company in Switzerland controlled by Willy Michel – so what do you think motivates Haag-Streit's Chairman and Chief Executive Officer in manufacturing and selling the company's products – Is it firstly money? – Or a heartfelt desire to tell the truth – to produce ophthalmological instruments that genuinely benefit patients? Well, we shall soon find out.

If you proceed to Haag-Streit Diagnostics website here: http://www.haag-streit.com/haag-streit-diagnostics/ and proceed to their slit lamp catalogue featuring their latest BQ 900 slit lamp with a general description with its technical specifications. Here you will observe the statement: "Since its introduction in 1958, the famous Goldman slit lamp BM 900 enjoys remarkable popularity amongst our customers because of its excellent optics and the impressive longevity. As a result, there are well over 100,000 of these original Haag-Streit slit lamps in daily use – including many from the first years of manufacturing… Following this tradition of slit lamp innovation, **the BQ 900 LED was introduced in 2010 as the first LED slit lamp in the world…"**

Next, if you view the *Technical Specifications* and view "*Illumination*" all that is stated about the light source is; "LED for examination (slit and background illumination)". That is all. There is absolutely nothing about the LED's light output expressed in lumens or illumination rated in lux at all. Since the light output is such an important and integral part of delicate ophthalmic equipment like this, one can only conclude the removal of this information from these *Technical Specifications* is deliberate. Here is another of their website product listings showing that this important light output information has been carefully removed from the BQ 900's technical specifications: http://www.haag-streit.com/products/slitlamp/slit-lamp-bq-900r.html Here is another: http://www.haag-streit.com/product/slitlamp.html

However, to be good at being "economical with the truth," you have to have a good memory and have to be very thorough – and Haag-Streit have neither of these virtues (uncharacteristic for the Swiss). Because when they first launched their BQ 900 series slit lamps with LED illumination they did give the light intensity information in the technical specifications at 450,000 lux, but have since removed it on most of their websites. However, the newer LED technical specifications are still available from their American branch, Haag-Streit USA!

Here they are on this website: http://haag-streit-usa.com/haag-streit-products/slit-lamps.aspx "Slit Lamp, Slit Lamps for Optometry and Ophthalmology / Haag Streit USA" – Note that in the full technical specifications of the Haag-Streit BQ 900 LED Slit Lamp, the LED has a MAXIMUM INTENSITY of 600,000 lux.

Here is another posting of it by Haag-Streit USA: http://www.haag-streit-usa/products/haag-streit-diagnostics/slit-lamps/ including the specifications of models: BQ 900 LED (600,000 lux), BP 900 LED (600,000 lux), BM 900 LED (600,000 lux), BD 900 Halogen (300,000 lux), BX 900 LED (600,000 lux).

Here is another posting by Haag-Streit International, clearly stating that their BQ 900 LED specification has an illumination intensity of 600,000 lux.
http://www.eyecap.com/activekb/categories.php?categoryid=6

Here is another in Sweden, showing the control illumination intensity settings of this Haag-Streit BQ 900 at: 150,000 lux at position ½; 300,000 lux at position 1; and 600,000 lux at position 2. http://www.essmed.se/produkter/diagnostic/slit-lamp-bq-900%C2%AE-(tb)-16645330

Previously, the author found a posting on the Internet that has since been deleted with all the illumination intensities in lux of all Haag-Streit slit lamp models. They were: BD 900 (300,000 lux), BM 900 (600,000 lux), BP 900 (600,000 lux), BQ 900 (600,000 lux), BX 900 (300,000 lux), BA 904 (205,000 lux). All these illumination specifications are still current.

Haag-Streit Slit lamp LED Blue Light toxicity:

But it's not only the *intensity* of the light that's so damaging to the eye. It is the specific *spectral wavelength composition* of the light that is so dangerous as well.

Excessive blue light (between 450 to 495nm) is extremely toxic to the human eye. It is now well proven to be profoundly implicated in destroying the cells on the retina – and it is the leading cause of macula degeneration worldwide which often leads to permanent blindness.

The evidence supporting this now is simply overwhelming. (The author deals with this subject far more extensively in much greater detail in *The Light Bulb Mafia* book).

In common with all white LEDs, Haag-Streit slit lamp LEDs are not only extraordinarily powerful, they also emit a very potent, highly damaging intense spike of blue light in this precise spectrum as well. In Haag Streit LEDs, the spike is precisely at 450nm to 460nm in the spectral curve. This could not be worse, as this is precisely the frequency and wave length band that is most responsible for destroying the cells on the retina.

If you go to: http://www.haagstreitdiagnostics.asia/product/slit-lamp/slit-lamp-accessories/led-illumination/slit-illumination.html then go to the right hand side of the opening page to "Downloads", then click "PDF Brochure LED", then scroll down the brochure to "Optimised light spectrum" you will observe a simple spectral graph showing the spectral curve of Haag-Streit slit lamps for both LEDs and tungsten lamps. You will note in the spectral curve of the LED that there is a sharp spike in the curve at 450-460nm. This is the specific blue light band that does the most damage to the retina.

In their brochure about their LEDs they incredibly state: "Some more power in the short wave lengths improves fluorescence and anterior chamber examination." This is correct, but it is also the precise spectral frequency of blue light that gradually blinds the patient! Can you imagine? These LEDs are now producing an illumination intensity six times greater than the sun, and much of this light is precisely in the frequency range and wave length band of blue light that is now well proven to destroy the epithelium cells of the retina? Permanently.

Example #2: Trevi Technology Inc. / iBEXeye.com = iBEX LED Slit lamps
https://ibexeye.com/about-us/

Trevi Technology Inc. / iBEXeye.com was founded in 2005 and is headquartered in Columbus, Ohio, USA. Although a relatively new company, this is one of the most technologically advanced slit lamp manufacturers in the world and the sales of its products are skyrocketing.

Unfortunately, in this author's opinion, while the company's LED-illuminated slit lamps are also some of the most powerful, high quality, versatile, and price competitive in the world, they are also among the most damaging and destructive of all.

But to give some credit to the company, this firm is also the most upfront and transparent in their technical specifications of all, and it does deserve full marks for that. Unlike most other slit lamp and ophthalmoscope manufacturers around the world that have clearly deliberately hidden and covered up the true power output, wave length, spectral characteristics and illumination levels of their LED-based products, (so no comment either good or bad can ever be given by anyone). It is refreshing to see that this company has not stooped to this highly unethical level. For this, it should be loudly applauded. Because without these vital facts, no author (including this author) could ever make any meaningful assessment, review, praise or criticism, either good or bad, of any product by any manufacturer.

While it is hard to believe this company's optical experts do not know about the seriousness of the BLUE LIGHT HAZARD or BLUE LIGHT TOXICITY emitted by their LEDs and how they are so highly dangerous to the retina, it is still a very specialized subject of ophthalmology, and there is a "small chance" that they may genuinely not actually know this at all. So in the assessment here the author will give them the benefit of the doubt. Had they known, arguably, it is likely that they would not have put so much extensive, precise, technical information on their website about their slit lamp product and their LED.

Only by being completely open, upfront and *transparent* about any drug, product or procedure, which this company clearly has, (so that it can be independently reviewed by anyone), can true medical science ever be improved upon for the benefit of all humanity.

While the author's following review of their LED slit lamp is indeed highly critical of it, unlike many of the other companies that have clearly deliberately withheld similar important information from their technical specifications so that no review can even be given – because of its excellent transparency, the author does not consider at this point that this company in any way is an unethical one, in spite of the fact he considers their LED slit lamp product is an extremely damaging one.

iBEX 2-Step LED Slit Lamp

iBEXeye.com / Trevi Technology's ***iBEX 2-Step Slit lamp*** is this company's premium and most widely selling product. All the following details about it are taken directly from their own

technical specifications on their own website: https://ibexeye.com/about-us/ and https://ibexeye.com/led-slit-lamp-biomicroscopy-products/new-ibex-2-step-led-slit-lamp/

In this company's statements about this high tech slit lamp, it notes it has a switch whereby the operator can actually change and fine tune the light wavelength and frequency. This is what they state:

"FINE-TUNED SPECTRUM: The output illumination provides a light spectrum that optimizes irradiance within specific 460-470nm and 570-580nm wavelengths. This spectrum and the distinct response peaks provide enhanced viewing of the anterior chamber, clarity of the posterior chamber, and the added versatility of improved fundus observation."

Appallingly, the 460-470nm setting is precisely right in the middle of the worst frequency of blue light that destroys the cells on the retina. Alongside the "FINE-TUNED SPECTRUM" statement is a simple spectral emission chart of their LED showing the spectral curve with a massive spike of blue light in it between 460-470nm. This could not be worse, as this is the most damaging specific frequency and wave-length band that harms the retina of all.

Here is what they plainly state about their LED:

"EXTRAORDINARY LED ILLUMINATION: The single element LED is an evolution in slit lamp engineering. With high-contrast color temperature, exceptional color rendering and an impressive illumination range of 24,420 lux to up to more than 1,000,000 lux, the iBEX LED is exceptional during direct, indirect and diffuse illumination. With excellent ventilation and the latest heat managing materials, the iBEX LED will operate with consistency for 10,000-20,000 hours, and virtually eliminate down time due to spent illumination sources."

Incredibly, this means, quite simply, that when this instrument is on full power at the 460-470nm setting, the eye specialists are blasting MORE THAN A MILLION LUX (or ten times more power than the maximum radiation illumination of the sun) directly into the eyes of their patients at the 460-470nm wavelengths – PRECISELY the most dangerous wavelengths that destroy the epithelium cells on the retina.

Only an imbecile would ever consider doing such a thing. Yet this is what all eye specialists all around the world are now doing to their patients that have this deadly LED slit lamp equipment.

In doing this, paradoxically, while the medical community may claim to be healing their patients of all sorts of eye problems – at the same time, they are unconscionably destroying the eyes of their patients and gradually sending them blind. It is as simple as that.

And to add insult to injury – not one of these pathological liars and medical charlatans has as yet spoken up and warned anyone about this radical change to LED illumination. Not one. (As

far as this author is aware at the time of writing). This includes all university optical scientists and professors of ophthalmology - worldwide. What an appalling disgrace!

So how come? It's not that a big number of them don't know of the serious dangers of blue light hazard and toxicity because it's been carefully studied and written about for many years.

For example, over 30-years ago, in 1980, Joseph L. Calkins and Bernard F. Hochheimer completed an extensive study and wrote a book titled, *Retinal light exposure from ophthalmoscopes, slit lamps, and overhead surgical lamps: An analysis of potential hazards.* They concluded their study by stating in their last paragraph: "We urge manufacturers to design safe surgical illuminators, hopefully with a "safe time" of 45 to 60 mins. Subtracting the especially hazardous portions of the blue spectrum and the unnecessary infrared spectrum will be a great help. Diagnostic instruments could hopefully be filtered as well. The primary impetus should come from the ophthalmologist in restricting nonessential light exposure, especially to the macular."

In August 2006, even the *British Journal of Ophthalmology* published an article titled, ***Blocking the blue*** by P. Hawse. Here are a few statements from this splendid article: http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1857207/

- "Biomicroscopy using the slit lamp produces at least three times the retinal exposure of light compared with the indirect ophthalmoscope and was thought to merit caution regarding potential retinal damage. When using the slit lamp, light is often shone in one area, often at full intensity, which increases the risk of damage. The calculated safe time for slit lamp biomicroscopy was found to be "as little as 8 seconds at maximum intensity," which may be exceeded in many clinical situations. (Kirkness C. Do ophthalmic instruments pose a hazard of light induced damage to the eye? Hazards of Light. New York: Pergamon Press, 1986179-186.186).
- Several studies have shown that light emitted from operating microscopes used in cataract surgery can damage the retina leading one investigator to a call for the routine placement of blue blocking filters in operating microscopes, while light exposure during endoillumination for vitrectomy surgery was also studied and found to pose a retinal phototoxicity hazard.
- The simple effort of mandatory blue light blocking filters would potentially protect millions of vulnerable patients from retinal damage caused by blue light exposure during ophthalmic examinations and treatments.
- More general animal research, not specific to one ophthalmic instrument, but none the less regarding blue light exposure and retinal damage, continues to find that blue light is toxic to the retina. In albino rat retinas, the death pathways mediating light induced apoptosis were studied, and a striking response with exposure to either blue light of 403nm (3.1 mW/cm^2) or green light 0f 550nm (8.7 mW/cm^2) was obtained. No apoptosis and no other light induced lesions could be found in green light exposed retinas, whereas massive apoptotic cell death occurred after illumination with blue light."

Bear in mind that these studies were made with the now, old, obsolete, relatively very low-powered incandescent or halogen lamps with very low blue light emissions and power compared to the massive power intensity of the LEDs of today.

Now with LED illumination up to ten times more powerful, all emitting an intense spike of poisonous blue light in their spectrum, the estimated damage at full intensity in 8-seconds then with old halogens, becomes less than a fraction of a second now with modern LEDs!

Children up to the age of about 10 or 12 years old will initially be most affected by this massive increase in blue light toxicity from LEDs.

Children and white Eyes

All children under about 12 years of age are by far most at risk from blue light retinal damage from LEDs. This is because all children under about 10-12-years of age have what ophthalmologists call "white eyes" where the clear crystalline lens in their eyes has not yet "yellowed" and fully matured as it does by about age 20 or older. Yellow/orange tints cut out blue light. In adults, after the lens has naturally yellowed, it filters out most (but not all) of the normal damaging blue light in natural daylight, but in children, the clear lens passes almost all the short wavelength blue light straight through to the retina and if it is excessive enough it permanently damages the retina. Even the blue light toxicity emitted from LED backlit iPhones, tablets, computer monitors and TV screens that is so bad for adults, is much worse for young children who often look at the screens much too closely. LED car headlights can also cause permanent eye damage to children if they walk directly in front of them.

Only a very few, truly ethical, LED lighting manufacturers throughout the world now openly warn their customers about the potentially serious LED blue light dangers of their LED products, even though it is not mandatory. To its credit, The Petzl Company is one of them: https://www.petzl.com/IT/en/Sport/Information-on-LED-lighting?ProductName=NAO&Familly=PERFORMANCE-headlamps#.V2pR5Xkkqos

But although this amount of blue light toxicity is damaging enough from these LED back-lit small appliances, the massive amount of blue light emitted by LED illuminated slit lamps and ophthalmoscopes shined directly into the interior of the eye is many times greater and much more dangerous.

Yet virtually no medical eye specialists or doctors throughout the world are warning about this enormous threat, when a lot of them very well know, above most people, this is the case. So why? Why are they almost all not speaking up and warning others about this tyranny? Do they really have their patients' best interests at heart? Or could it be they have a number of ulterior motives which forbid them from doing so? Could it be the love of money or priority to seek personal gain and profit? Peer pressure? Or could it be a profound spiritual belief system that permeates their profession? Well, we shall find out.

CHAPTER FIVE

THE GOOD & BAD SIDE OF THE MEDICAL PROFESSION

In no way is there any intention here to repudiate *all* orthodox optical science and medical practice, or conversely approve of it all either. Some is good, some is bad.

The good side of the medical profession:

The good side of it is, if you feel you have a health issue or serious eye complaint, such as a detached retina, for example. It is an emergency and you must see an eye specialist urgently to surgically repair it or otherwise you may go blind. If you have a broken leg or need a hernia repaired then go to a hospital and they will treat you very well. In this and other areas, some orthodox science, medical and surgical treatment now is simply superlative and undoubtedly is very good. So one must be careful to remain 'balanced,' and not 'throw the baby out with the bath-water' in criticizing orthodox medical treatment. But it is far from perfect, and there is a very bad side associated with it as well, which all people should clearly be made aware of.

The bad side of the medical profession

For example, if you find you have developed early onset or age-related wet macular degeneration (millions around the world have, and more often than not, it is caused by excessive blue light toxicity or deficiencies in the diet), your ophthalmologist will inevitably advise you to have a very nasty injection into the eye every one or two months of either Eylea (aflibercept), Lucentis (ranibizumab) sold by Novartis, at $US2000 to $US3000 a shot, or Avastin (bevacizumab), sold by Roche at about $US100 a shot. In more recent times radiotherapy has been used in some countries, with as yet unknown long-term results. Both these drugs, Avastin and Lucentis, were created by Genetech. Both drugs are very similar, but Lucentis is outrageously expensive. Yet all these drugs are no more than highly expensive snake oil. Apart from temporarily reducing the bleeding on the macula, in the short term only, they have never cured anyone of macular degeneration – ever! But they have made billions for the doctors and pharmaceutical companies concerned. Indeed, Avastin is used in chemotherapy as well and it is an entirely *off-label drug* which means it has never even been officially approved for ophthalmic use to treat AMD or any eye problem like this at all.
https://www.youtube.com/watch?v=DKH-C7KPn8Q
https://www.youtube.com/watch?v=hT_WteXMfL0

Even the bone-through-the-nose primitive witchdoctors in the deepest remote areas of Africa don't stick sharp needles in the eyes of their patients once a month like this and then pump

them full of snake oil as easy money spinners. But highly trained university graduates, medical professionals, ophthalmological and orthodox doctors repeatedly do – while they unethically steal billions off their patients – who are often virtually bankrupted by the outrageous costs – while the doctors all very well know the drugs absolutely do not work.

To make matters worse, virtually all of the world's foremost age-related macular degeneration (AMD) organisations and blind institutions belong to or are inseparably linked to AMD Alliance International (AMDIA), headquartered in London. A good proportion of the AMD Alliance Advisory Panel's most prominent scientific and medical advisors have close financial connections to either Roche, Novartis, Genetech or Alcon (the biggest manufacturer of IOLs (lenses used in cataract surgery) in the world. One can easily check out the top twenty biggest shareholders in any of these giant pharmaceutical and medical product companies online and see that at the top they are, in turn, run and owned by a handful of powerful international banking pirates. The whole system is a giant scam, is totally corrupt, and people need to be aware that the organisation or physician they are dealing with or supporting may often have other "financial interests of priority" that do not necessarily coincide with the best interests of their patient.

World Medical Association: Diet & Nutrition

The subject of diet and nutrition is extensive and is simply outside the general focus of this book, but it must be mentioned in respect to the medical profession. The World Medical Association, controlled at the top by big international bankers and giant pharmaceutical companies, strictly ensures all doctors learn almost nothing about diet in their medical training and yet diet has a huge influence in protecting against or even curing a number of serious eye diseases, yet you will never be told anything about it by a mainstream medical doctor. The reality now is, if there is no money in it, doctors don't want to know about it. It is as simple as that.

However, there still are a very small, very rare, handful of medical doctors who genuinely want to help their patients cure themselves through nutrition and diet rather than through big-business promoted pharmaceutical snake oil drugs promoted by the WMA. The peer pressure against them is immense, and it takes a lot of courage for them to speak up about not relying solely on pharmaceutical drugs to treat their patients, and air their honest views.

One such courageous man, John McDougall M.D., actually authored a bill in the California State Senate (SB 380) in 2011 in order to require doctors to receive at least some continuing education on diet and nutrition in their four year medical training. Perhaps the California Medical Association's scandalous opposition to his Bill briefly best summarises what is taking place all around the world, dominated by the WMA that indirectly controls all national medical associations. In this case it is the California Medical Association. Here are John McDougall MD and Don Forrester MD courageously testifying before the California State Senate in favour of SB 380: https://www.youtube.com/watch?v=DZRYxz0Eft8

Here are two shocking video clips actually showing how corrupt the system really is, with the California Medical Association actively opposing the Bill to mandate even just 7-hours of nutritional training to be added to their four year medical college degree courses before 2017. What an incredibly degenerate bunch of highly educated imbeciles most of them really are!

- http://nutritionfacts.org/video/medical-associations-oppose-bill-to-mandate-nutrition-training/ (opposition)
- https://www.youtube.com/watch?v=ADlY8CYllhU (opposition)
- https://www.youtube.com/watch?v=uNFaHlfU6w4 (exposing the corrupt system – Mark Wyland Republican Member of the Committee with his Campaign Contributions)

The World Medical Association (WMA)

The WMA was created by the British Medical Association in 1945 and established in Paris in September 1947. It controls every medical doctor in the world in medical affairs and practice. As at 2013, it represented 102 National Medical Associations, 106 Constituent Members and 1013 Associate Members representing more than 10 million physicians around the world. Today its Secretariat is situated in Ferney-Voltaire, France, adjacent to Geneva so that it can carry out close official relations and help control the UN World Health Organization (WHO). Behind the scenes, it is controlled by the world's biggest pharmaceutical companies, in turn controlled by a handful of incredibly wealthy international banking pirates and the rich families that own them, domiciled mainly in New York and London. http://www.wma.net

International Federation of Pharmaceutical Manufacturers & Associations (IFPMA)

The same goes for the IFPMA. It represents and controls every pharmaceutical association and pharmaceutical company in the world. Formed in 1968, it is based in Geneva, Switzerland. It also works closely with the UN.

Phoebus Cartel & Global Lighting Association

The **Phoebus Cartel** (named after the pagan Greek god of light, Phoebus-Apollo – Roman name Lucifer) controls world light bulb production. In 1924, the Phoebus Cartel was created in Geneva by the world's biggest light bulb manufacturers to limit the life of light bulbs, and through a devious system of carefully planned obsolescence, to ensure members' factories were kept running and profitable. https://en.wikipedia.org/wiki/Phoebus_cartel

Prior to 1924, incandescent light bulbs would last over 2500 hours or more and some would last a lifetime. The members of the Phoebus Cartel all secretly agreed to limit the life of their bulbs to no more than 1200 hours. At the beginning of WW2, in 1939, the Phoebus Cartel broke up, and after the end of the war was replaced by a number of global, regional lighting associations, which culminated in 2007 with the re-formation of the Phoebus Cartel under the name of the Global Lighting Forum, later renamed the Global Lighting Association – which now represents and controls the activities of over 5,000 lighting and light bulb manufacturing companies worldwide.

Global Lighting Association (GLA)

The Global Lighting Association has enormous power, and includes all the world's biggest lighting companies and national associations such as the US-based National Electrical Manufacturers Association (NEMA). This is just one member association out of many. To appreciate even just this one member association's massive power under the GLA and the huge number of US corporations it alone represents, view this list of its members: http://.nema.org/about/pages/members.aspx Members of the Global Lighting Association may be seen here: http://www.www.globallightingassociation.org/members
In turn, the Global Lighting Association controls the lighting policies of the UN, OECD, EU and every major country in the world. The association has a hidden overall agenda and goal to abolish all incandescent, halogen and fluorescent lamps and convert the whole world to LED lighting by 2020, or soon thereafter. These plans can be found in PDF files in their extensive library on their website here: http://www.globallightingassociation.org/library
By converting the whole globe to LEDs, they claim, because of the huge energy savings from LEDs, the US alone will not have to build up to forty new power stations a year, with proportionally similar savings in other countries as well. In doing this, they will force the world to buy more and more of their expensive products creating billions in profits for themselves. But they forget to mention, that this new giant blanket of blue light toxicity emitted from the LEDs will gradually send the whole world blind through causing early onset and age-related macular degeneration.

Why the sky is blue & role of blue light

But more than this. Blue Light also controls the "circadian rhythms" in virtually all animals including humans and profoundly affects the production of melatonin and therefore the health of every animal on earth. Only a very precise amount of blue light ever passes through the atmosphere to us here on earth. Generally the electromagnetic radiation spectrum is divided up into three broad divisions:

1. **HIGH FREQUENCY: Invisible/Short Wavelength/High Frequency radiation.** (Gamma-rays, X-rays and Ultraviolet). This is generally the most damaging radiation and highest frequency.
2. **VISIBLE LIGHT SPECTRUM.** It is usually divided up into the seven colours or bands of the rainbow. (Indigo-violet (wavelength 380-450nm), blue (450-495nm), green (495-570nm), yellow (570-590nm), orange (590-620nm), and red (620-750nm).
3. **LOW FREQUENCY: Invisible/Long Wavelength** – includes Infrared, microwaves and radio waves.

In ophthalmology, it is primarily the High Energy Visible Light (HEV light) in the violet/blue band from 380nm to 500nm in the visible light spectrum that most severely damages the retina and causes macular degeneration. Blues closer to 400nm look more violet, and those closer to 500nm appear more greenish in colour. Pure blue in the middle is about 470nm.

Most of the intense, damaging radiation from the sun is filtered by the Van Allen Radiation Belt at an altitude between about 1000km to 60,000km above the earth (named after James Van Allen the NASA scientist who discovered it). It is in fact a number of belts of distinct layers of energetically charged particles (plasma) that surrounds the earth held there by the earth's magnetic field.

When the sun's rays that get through the Van Allen Radiation Belt carry on down and strike the atmosphere, the gas molecules in it scatter the higher energy (high frequency blue, violet, and ultraviolet (UV)) portions of the sunlight more than they scatter the lower energy red portion of the sunlight (called Rayleigh scattering named after the physicist Lord John Rayleigh). Because the gas molecules are smaller than the wavelength of visible light, depending on the wavelength band of the light, each wavelength reacts differently when it strikes the molecules. Most of the longer wavelengths with the lowest frequency and energy (green, yellow, orange and red) are allowed to pass straight through. However, when the shorter UV, violet and blue wavelengths bump into the molecules, because they are "oscillating" (similar to the way thinner strings emit higher notes or sound waves "vibrating" from a guitar) at a much faster rate (even though they have a higher frequency and energy) – much of the light gets absorbed by the gas molecules and the molecules radiate the colour that was absorbed in different directions. Hence, this is why the sky is blue.

Daylight is predominantly made up of the green, yellow, orange and red bands of visible light that illuminate the earth. However, still some of the meticulously filtered UV and blue light is allowed to pass on through to the earth which is essential for all plant and animal life.

This highly filtered and measured blue light rarely is given the prestige it deserves by biologists and medical scientists. Although the circadian rhythm in animals can be modestly modified by food and temperature, blue light is still by far the most powerful external stimulus for synchronizing all functions of the body. It operates in unison with the cyclic exposure to the light of day and darkness at night – and it is **ALL CONTROLLED THROUGH BLUE LIGHT BETWEEN ABOUT 450-500nm RECEIVED BY A TINY YELLOW SPOT IN THE RETINA OF THE HUMAN EYE!**

This tiny yellow spot is called the *macula lutea* from Latin, *macula* 'spot' and *lutea* 'yellow'. It is a very tiny oval-shaped, highly pigmented "yellow spot" of two or more layers of ganglion cells, only about 6mm in diameter in the centre of the retina of the human eye. The centre of the macula, again, contains another even smaller spot, only about 1.5mm in diameter (about the size of a pinhead), called the *fovea*, which is the most sensitive part of the retina and contains the largest concentration of cone cells in the eye. About half the nerve fibres in the optic nerve carry information from the fovea. While it makes up less than 1% of the retinal size, it takes up over 50% of the visual cortex of the brain. Because the macula is yellow, it absorbs excess blue, violet and ultraviolet light and acts as a final sunblock against these wavelengths to protect the most delicate part of the retina. We need a healthy macula to give us normal, high resolution, central vision, but because it is so small and delicate, just the slightest damage the size of a pinprick to the fovea can destroy central vision. It also means

that if a person gets even a relatively small amount of degeneration in the macula causing the cells to die, it doesn't take much for the disease to become very serious indeed affecting central vision, often ending in blindness. The yellow colour of the macula is derived from lutein and zeaxanthin, which are yellow xanthophyll carotenoids, derived from the diet.

The human eye is designed to cope only with a relatively small, measured, balanced amount of blue light. Too much blue light doesn't only damage the retina and cause macula degeneration. It destroys the entire daily balance of hormones, neuro-hormones and neuropeptides etc. in the entire body – causing all sorts of other serious health problems.

On April 16, 2010, AMD Alliance International (AMDAI) released their first ever study with estimates of the global cost of vision loss – nearly $3 trillion ($US2,954 billion) for 733 million people living with low vision and blindness worldwide in 2010.
http://www.amdalliance.org/cost-of-blindness.html

So perhaps the millions of supposed "experts" – business executives, optical engineers, scientists, doctors etc. – employed by the over 5,000 corporations represented by the Global Lighting Association that manufacture LEDs – that are beginning to dazzle the whole world's retina with massive levels of blue light might like to consider that this huge increase in blue light toxicity is going to **cause a global plague of early onset macular degeneration in the very near future (not to mention other serious eye and general health problems)**.

By using the deception that they are going to "save the world billions of dollars per year" in reduced electricity generation and CO2 emissions by doing so - they might like to reflect a little on the AMDAI study's global cost estimate of vision loss – and the countless suffering they are presently beginning to thrust upon untold numbers of new victims of AMD and other debilitating eye problems into the bargain on top of the $3 trillion it is currently costing.

In Taiwan now alone, for example, fully 84% of all 16-year old school children now have High Myopia and other serious eye problems. This is only the beginning of horrendous eye problems to come. But we should not all be too surprised to see that the light bulb industry and medical profession's shocking lust for money is not the only sin in motivating them not to act in the best interests of their patients and general members of the public.

Although not widely known, the medical profession is in fact, at its very heart, quite simply, a 2500-year old pagan Greco/Roman religious cult. Although they will often try to deny it, in essence the medical profession is indoctrinated with a spiritual belief system from ancient Greece and Rome that dominates most doctors' simple minds, and far too often compromises their judgment in how they treat their patients.

So let's take a brief look at it, and try to understand exactly why the medical profession, sadly, can't ever be fully trusted to care for the best interests of their patients or tell the truth about anything.

CHAPTER SIX

THE DARK SIDE OF THE MEDICAL PROFESSION: A GRECO/ROMAN CULT

But over and above their inherent lust for money, there is an extremely 'DARK SIDE' in both the medical profession and pharmaceutical industry, founded on ancient Greek paganism.

For nearly 2,500 years, virtually all physicians and medical doctors around the world at graduation have taken the *Hippocratic Oath* during which they swear by Apollo and his son Asclepius and all the pagan Greek gods. Today some doctors make a "Declaration," more not because they don't outwardly worship Apollo, but because they know they are so unethical they can't even fulfil parts of Hippocrates' (460-370 BC) Oath and personal instructions requiring doctors not to carry out abortions, euthanize patients, never do harm to anyone, and promise always to keep all patient's records entirely confidential and secret.

In the early Church, Christians identified Apollo and his son Asclepius, the Greco/Roman gods of medicine and healing, while carrying their magical writhing serpent staffs, as the direct counterfeit and opposite of Jesus Christ, the "great physician" mentioned in Matthew 9:12 and Mark 2:17.

The ancient Romans had borrowed many of their old pagan practices, superstitions, and gods from Greece. The chief Roman sun god deity was Jupiter (equivalent to Zeus in Greece).

However, during the time of Christ there was a massive change, when the first emperor of the Roman Empire, Gaius Julius Caesar Augustus (63BC – 14AD) became the chief ruler of Rome ruling alone from 27BC until his death in 14AD. Like no other leader, Augustus considered himself under the special protection of Apollo and even considered himself as his son. During his reign he dedicated a statue of himself with the deity's attributes in Apollo's Temple, and soon Apollo became the chief god in Rome, equal to Jupiter, where he, dressed in white, called himself Pontifex Maximus. After Augustus died, the worship of Apollo carried on in Rome and was later merged into the Roman Catholic Church, with the Pope taking over Augustus's role, and the medical shamans in the Church carried on the divination arts, customs and traditions of the priests of Apollo.

One of the sons of Apollo, who was transformed into a serpent-dragon was Asclepius (Latin: Aesculapius) who carried on his father's power over the medical profession. As the Greek god of medicine, Asclepius carried a *Serpent-entwined Staff*, now the emblem of the UN World Health Organisation (WHO) and the World Medical Association (WMA).

Similar to Asclepius's *Serpent-entwined Staff*, most medical and pharmaceutical organisations now use the *Caduceus* as their official emblem. It is a short herald's staff entwined by two serpents modelled on the *Wand of Hermes* or *Wand of Mercury*, the Roman god of merchants, liars and thieves. Many believe the Caduceus is also just another version of Asclepius's staff.

One of the most famous healing temples of Asclepius was located on the island of Kos where it is thought Hippocrates, the legendary "father of medicine" began his illustrious career. The diviner's rod/staff of Asclepius has a serpent entwined around it because a special type of snake was used in healing rituals in honour of the god. His temples were filled with venomous snakes called *Aesculapian snakes* which crawled around the floors of the temples where all the sick and injured slept. These snakes were introduced on the dedication and founding of his temples. From about 300BC, these healing temples were called Asclepieia, (now called hospitals) and were places where people would go to appeal to the god Asclepius to be healed. Once inside the temple, expensive offerings and sacrifices (excessive medical fees today) to the priests of Asclepius (now called medical doctors) had to be made before the temple's sacred dogs (pharmaceutical companies) were permitted to lick the wounds of the devout patients. All these practices were preserved, refined and modified through custom and tradition to become the medical associations and hospitals that we have today.

The early Christians believed these writhing serpents in the temples of Asclepius were a form of the venomous fiery serpents that bit the people in ancient times when many in Israel died in the wilderness – and the serpent on the Rod of Asclepius was the Greek misrepresentation of the fiery serpent set on the pole used to heal the people by Moses around 1500BC. (Numbers 21:5-9) – which was preserved for about 700 years until King Hezekiah the son of Ahaz king of Judah destroyed it (2 Kings 18:1-4). Jesus refers to this serpent as relating to and being symbolical of himself, in dying on the cross for the sins of the world, thereby giving everlasting life to all who believe in him. (John 3:18).

Almost every term in medicine today originates from this Greco/Roman pagan period. About three quarters of all medical terms today are Greek. Asclepius had six daughters which personified different areas of medical practice. One of them was called Hygeia, the Greek goddess of Health, from which the modern word hygiene or 'health' today is directly derived. Another was the goddess Panacea, a name in Greek derived from *panakēs* 'all-healing.' Another was Iaso, the goddess of recuperation from illness. Aceso was the goddess of the healing process. Aglaea was the goddess of the glow of good health. Asclepius's wife was Epione, the goddess of soothing pain; in fact, in Greek, her name means 'soothing.' The physicians and attendants (now all medical doctors today) who worshipped and served Asclepius were called the *Therapeutae of Asclepius,* derived from the Greek word *therapeuein* 'minister to, treat medically' – from which today the term 'therapeutic medicine' is derived.

The modern medical term 'pandemic' and similar words also come from the name of the goddess Panacea. Paradoxically, of course, while claiming to be the benevolent goddess of good health, she at times helped her grandfather Apollo spread plague on his enemies.

In ancient Greece, Asclepius was worshipped by the masses as a god/man, the personification of the miracle working physician of consummate medical skill, whose patients prayed to and placed their religious faith in. It was a supernatural, blind faith in medicine and physicians, who by and large knew very little about life or death at all. That led to (and still exists in the minds of many people today), in mythology, to finally motivate Zeus to kill Asclepius with his thunderbolt, because he claimed he raised Hippolytus from the dead and made the mistake of accepting gold for it. Herein, belies the ultimate demise of the medical profession – money!

So, while many physicians are unaware of it today, the medical profession at its highest level is nothing more than a Greco/Roman religious cult.

At its heart is a firmly cast dogma of tunnel vision focused not on good nutrition or prevention through natural health remedies or diet, but on SURGERY that costs an arm and a leg which if it doesn't kill the patient, it will bankrupt him. The Greek word *Asclepios* literally means 'to cut open.' Hence, the reason why doctors call their consulting rooms '*surgeries'* from the Greek word *kheirourgia* derived from *kheir* 'hand' and *érgon* 'work.' The doctors' "scalpel" used today by all surgeons, is actually a direct derivative of the word Asclepios.

Apollo was the special son of Zeus and Leto, was a powerful deity in both Greece and Rome, admired by almost everyone who in day to day living felt they had a special affinity with him as a bright dashing young man, rather than Zeus, his elderly father.

In Apollo's role as god of light he was often called Phoebus-Apollo. Phoebus in Greek means 'the Radiant One.'

In this leading role, as the sun god, he was worshipped as the "god of radiant, bright light." Phoebus-Apollo was the sun god who, by means of his darting rays, could suddenly spread disease and death to men and animals. When he did this, it was often with the assistance of his twin sister Artemis, the moon goddess, in her sadistic role as the divinity of death.

In Greek mythology, Phoebus Apollo therefore, was the most subtle and benevolent deceiver of all. In ancient Rome he deceived almost everyone. On the one hand, he was characterised in statues and sculptures as an innocent, naked, pure, blue-eyed, handsome young man, with a laurel wreath on his head, clean-shaven and carrying either a lyre, or his bow and arrows. He was a Christ-like figure who promoted peace and harmony. He was the god of prophecy, philosophy, colonization, medicine, healing, archery (but not for war or hunting), poetry, dance, music, agriculture, trees, protector of cattle and fruit trees, herds and flocks, shepherds, protector of pastures, the elimination of plagues and the giver of divine guidance.

But on the other hand, as time passed, he took on a DARKER SIDE. Gradually he was no longer confined to the domain of good, radiant, bright light and medicine. Deceptively lurking beneath his innocent blue eyes and youthful posture, was a wicked split personality. He was a sexual deviant, had very few morals when it suited him, and he became a ruthless tyrant when he got angry. With Artemis, his wife and sister, he cold bloodedly murdered the Niobids

with his poisoned arrows of searing bright light. He sent the deadly plague on his enemies. At times he was miraculously transformed into both a serpent and a dragon.

When John wrote the book of Revelation in 96AD, he explained precisely who this Greek deity Apollo really was, and what his infamous role would be in the last days heralding a time of apocalyptic earthly judgment:

"And they had a king over them which is the angel of the bottomless pit, whose name in the Hebrew tongue is Abaddon, but in the Greek tongue hath his name Apollyon." (Revelation 9:11). In Greek, *Apollyon* means 'Destroyer.'

He further explained just who this ancient serpent deity of Asclepius really was, now heading the World Medical Association, and what he was going to do during this cataclysmic period;

"And the great dragon was cast out, ***that old serpent****, called* ***the Devil, and Satan, which deceiveth the whole world****: he was cast out into the earth, and his angels were cast out with him."* (Revelation 12:9).

While most people are completely unaware of it, this prophesied momentous period of destruction is beginning right now, and it involves a massive war between Christ and Lucifer, good and evil. The evil is very deceptive, deeply involving the medical profession and light bulb industry. What previously happened in fascist Nazi Germany involving big business, scientists and the medical profession, is now being repeated throughout the entire world on an international scale. But now it is much more deceptive, subtle, and difficult to discern.

It is relatively easy to understand how orthodox weapons like tanks, warships, fighter aircraft, guns, bombs or nuclear missiles can be used to massively harm or kill large numbers of people, and be a serious threat. But when it comes to electromagnetic radiation or beams of light, delivered by military weapons, it is much more difficult to see. Yet again, even more difficult to comprehend still, is the destructive nature of a highly toxic beam of deadly white LED light, or of a vaccine shot delivered not by a soldier with a powerful machine gun , but by your local, friendly, highly admired and universally respected family doctor.

That is how most Germans were so badly deceived by the Nazis. It was very cunning and subtle. It was those who were the most highly respected in the community that betrayed the public the most. Sadly, once again, all these trends now developing throughout the world of lighting, health and medicine, point to this same thing being repeated again. Throughout history, euthanasia of all those considered "useless eaters" has been the hallmark of despotism, dictatorships, tyrannical leaders, cruel and oppressive governments, and more often than not it has been duplicitously implemented to "protect citizens" in the name of "health care" by sadistic leaders and executed by the medical profession. The names of the US Patient Protection and Affordable Care Act (PPACA) colloquially "Obamacare," and WHO programs in Third World countries are ominously reminiscent of terms used in past dictatorships. It is this old pagan Greco/Roman mind-set that spawned the Nazi Holocaust.

CHAPTER SEVEN

NAZI DOCTORS:
INFORMED CONSENT, VACCINATION & LEDS

This "religious" aspect about the medical profession will be extremely unpopular for many. However, it needs to be written – to properly understand why otherwise initially good, well-mannered, law-abiding, caring, intelligent, highly educated people, can be so rapidly transformed, almost overnight, to become such evil, pathological criminals and brutal killers.

Nazi Doctors Trial
https://en.wikipedia.org/wiki/Doctors%27_trial

But it is a sad fact, many of the most evil Nazis under Hitler, were medical doctors, who sterilized an estimated over 3,500,000 German citizens, planned and enacted the systemized mass murder of "undesirable" members of German society through the "Action T4" euthanasia program." https://en.wikipedia.org/wiki/Action_T4 A small percentage of the worst offenders were prosecuted for human experimentation and mass murder at the Doctor's Trial at the Palace of Justice in Nuremberg December 9, 1946 – August 20, 1947. Of the 23 defendants, 20 were medical doctors. Of the 23 defendants, seven were acquitted, seven received death sentences and the remainder received prison sentences.

Just before the end of WW2, Wolfram Sievers and his Nazi medical psychopaths, were experimenting on inmates with vaccines in Block 46 at Buchenwald, to ultimately, not protect, as they alleged, but kill off large sectors of society deemed "unworthy of life" and "unfit to live". Sievers was executed on 2 June 1948. Many of his contemporaries were not even tried at all. Most of them were given light sentences and later were given top jobs with chemical or pharmaceutical companies that now produce most of the world's vaccines.

Fritz ter Meer, who was found guilty of slavery and mass murder at Auschwitz in the IG Farben Trial in 1948 was sentenced to seven years imprisonment, but was released with a pat on the hand in 1950 – to become Chairman of Bayer AG in 1956 – now one of the biggest manufacturers of vaccines in the world. Karl Krauch, also found guilty at the IG Farben Trial in 1948 "of war crimes against humanity," was given a six year sentence, but was also released with a pat on the hand in 1950 – to become the Chairman of BASF in 1952 – also now involved with the supply of some of the most toxic ingredients in vaccines such as thimerosal (mercury) and phenol (carbolic acid) used as preservatives. Phenol, that was used in the injections by Nazi doctors to kill people in the T4 program, is remarkably now being used in vaccines.

Karl Krauch was a Senator of the Kaiser Wilhelm Society for the Advancement of Science that headed many of the Nazi scientific operations and institutes. Although Hitler had written about his plan to implement sterilization and eugenics in *Mein Kampf* published in 1925-1926, it was the Kaiser Wilhelm Institute of Anthropology, Human Heredity, and Eugenics, (1927-1945) headquartered in Berlin (and partially funded by the Rockefeller Foundation), that inspired, planned and coordinated the *Action T4* program and Nazi mass genocide in Europe. After WW2, the Kaiser Wilhelm institutes were renamed the Max Planck Society. https://en.wikipedia.org/wiki/Action_T4 http://mapio.net/o/1208087/ https://www.ushmm.org/exhibition/deadly-medicine/profiles/ https://www.youtube.com/watch?v=EpKc-4F7iOA https://en.wikipedia.org/wiki/Hadamar_Euthanasia_Centre http://www.estherlederberg.com/Eugenics%20(Anecdotes)/Kaiser%20Wilhelm%20Institute%20of%20Anthropology,%20Human%20Heredity,%20and%20Eugenics.html

Today the Max Planck Society now consists of over 80 research institutes, has a budget of nearly €2 billion and has a staff of 17,000. The logo of the Max Planck Society is the head of the Roman goddess of medicine and wisdom, Minerva (Greek Athena). In Rome, she was known as *Minerva Medica* and was the goddess of medicine. The Greek historian Plutarch called Athena, *Athena Hygieia 'health'.* Originally Athena was the Minoan domestic Snake Goddess. Not only is today's capital of Greece named after her, but apart from being portrayed in the logo of the Max Planck Society, she is also abhorrently displayed on the Medal of Honor, the highest military decoration of the United States of America. Her sacred creature is the owl, in Rome called the Owl of Minerva and in Greece the Owl of Athena.

Nazi Fascism, science and medicine was inseparably intertwined in the devout worship of these Greco/Roman gods and goddesses. And it is the same today.

Nuremberg Code
http://www.imarcresearch.com/blog/bid/359393/Nuremberg-Code-1947

After the judges on August 20, 1947, delivered their verdicts in the "Doctors' Trial" against Karl Brandt and 22 others, the trial verdict adopted ten points (to try and ensure this medical tyranny would never happen again), to define legitimate medical research which constituted a document called the "Nuremberg Code". https://en.wikipedia.org/wiki/Nuremberg_Code

Point Number One in the Nuremberg Code requires the voluntary, well-informed understanding and consent of the human subject in a full legal capacity.

The Nuremberg code includes such principles as informed consent and absence of coercion. These principles were in turn incorporated into the Code of Federal Regulations Title 45, Part 46, by the US Department of Health and Human Services, governing federally funded human subject research in the United States, and later into the Declaration of Geneva. This is commonly called "Informed Consent."

Hippocratic Oath
https://en.wikipedia.org/wiki/Hippocratic_Oath

The Greek physician Hippocrates (460-370 BC) is often called the father of modern medicine in Western culture. His oath was written in Ionic Greek in the late 5th Century BC., and it historically has been taken by all physicians on graduation.

The first verse reads; *"I swear by Apollo The Healer, by Asclepius, by Hygieia, by Panacea, and by all the gods and goddesses, making them my witnesses, that I will carry out, according to my ability and judgment, this oath and this indenture."*

All medical doctors throughout the world cannot practice unless they take this pagan oath or derivations of it (now in the Declaration of Geneva), committing their service to these ancient pagan Greek gods and goddesses. Hence, the magical, occult staff of Asclepius with the Serpent of Satan wrapped around it, is the international symbol of the World Medical Association, and the global medical profession.

Declaration of Geneva
https://en.wikipedia.org/wiki/Declaration_of_Geneva

The Declaration of Geneva (Physician's Oath) was adopted by the General Assembly of the World Medical Association (WMA) at Geneva in 1948, amended in 1968, 1983, 1994 and revised in 2005 and 2006. It is a declaration of a physician's dedication to the humanitarian goals of medicine, being especially important in view of the medical crimes which had just been committed in Nazi Germany. The Declaration of Geneva was intended as a revision of the Hippocratic Oath to a formulation of that oath's [supposed] moral truths that could be comprehended and acknowledged in a modern way.

In 1946, a study committee had been appointed to prepare a "Charter of Medicine" which could be adopted as an oath or promise that every doctor in the world would make upon receiving his medical degree or diploma. It took two years of intensive study of the oaths and promises submitted by member associations to draft a modernized wording of the ancient Oath of Hippocrates which was sent for consideration to the WMA's second general assembly in Geneva in 1948. The medical vow was adopted and the assembly agreed to name it the "Declaration of Geneva."

This document was adopted by the World Medical Association only three months before the United Nations General Assembly adopted the Universal Declaration of Human Rights (1948) which provides for the security of the person.
The Declaration of Geneva, as currently published by the World Medical Association reads:

"At the time of being admitted as a member of the medical profession:

- *I solemnly pledge to consecrate my life to the service of humanity;*

- *I will give to my teachers the respect and gratitude that is their due;*
- *I will practice my profession with conscience and dignity;*
- *The health of my patient will be my first consideration;*
- *I will respect the secrets that are confided in me, even after the patient has died;*
- *I will maintain by all the means in my power, the honour and the noble traditions of the medical profession;*
- *My colleagues will be my sisters and brothers;*
- *I will not permit considerations of age, disease or disability, creed, ethnic origin, gender, nationality, political affiliation, race, sexual orientation, social standing or any other factor to intervene between my duty and my patient;*
- *I will maintain the utmost respect for human life;*
- *I will not use my medical knowledge to violate human rights and civil liberties, even under threat;*
- *I make these promises solemnly, freely and upon my honor."*

World Medical Association (WMA) and its immense global power
www.wma.net/
https://www.youtube.com/watch?v=Uv1JDz8Ttfk

The World Medical Association controls every medical doctor in the world – more than 10 million of them. It was conceived by the British Medical Association in 1945, and formerly established on September 18, 1947. It is now headquartered in Ferney-Voltaire France (close to the WHO headquarters), and behind the scenes it is still controlled by the British Medical Association, giant City of London banks and multinational pharmaceutical companies. Currently Sir Michael Marmot (UK) is President.

Most people, when they visit their family doctor, eye specialist or local hospital simply have no idea at all that the medical professional they are dealing with belongs to and is subservient to one of the most corrupt, richest, devious, political, big business, pagan organizations on earth.

For example, the WMA has close business and political partnerships with all agencies of the United Nations, not just the World Health Organization (WHO). It has close partnerships with the International Federation of Pharmaceutical Manufacturers & Associations (IFPMA) and International Pharmaceutical Federation (FIP) – which between them represents every major pharmaceutical company in the world; the International Hospital Federation (IHF) which controls most of the hospitals around the world; the International Federation of Medical Students' Associations (IFMSA); the International Alliance of Patients' Organizations (IAPO); World Health Professions Alliance (WHPA); World Dental Federation (WDF); International Council of Nurses (ICN); International Confederation of Midwives (ICM); International Council of Medical Scientific Organizations (CIOMS); International Federation of Physiotherapists (WCPT); Medical Women's International Association (MWIA); World Federation of Medical Education (WFME); World Psychiatric Association (WPA); World Veterinary Association

WVA); The International Federation of Red Cross and Red Crescent Societies (IFRC); World Trade Organization (WTO); World Intellectual Property Organization (WIPO); International Telecommunication Union ITU); and many more, plus the WMA controls the medical policies in every university school of medicine in the world through its 111 national medical associations.

The World Medical Association's official corporate partners are: Bayer Pharmaceuticals, Eli Lilly and Company, GlaxoSmithKline and Pfizer, Inc. These pharmaceutical companies are amongst the most corrupt in the world. The power of the World Medical Association is simply immense, way above the comprehension of the average person in the street. http://www.wma.net/en/60about/80alliance/20partners/index.html
http://www.wma.net/en/60about/80alliance/10officialrelationship/index.html

Developed over 2000 years or more, the global medical profession have evolved a refined, corrupt "no faults system" through their medical councils and disciplinary tribunals to discipline themselves, which makes it virtually impossible to successfully win a case against them or to sue them through the civil courts. Even lawyers don't have this unique privilege. In most cases, doctors will cover up for each other, which makes it extremely difficult for patients to sue them. While it is possible to successfully sue a doctor, malpractice lawsuits are incredibly expensive, time consuming and are an uphill battle with little guarantee of success.

For example, according to the Canadian Medical Protective Association, the defence organization that acts for most Canadian doctors, two-thirds of cases are dismissed or discontinued, a quarter are eventually settled, and in only 3% of cases does the judgment go to the plaintiff.

In countries like New Zealand, it is virtually impossible to even sue your doctor through the civil courts as cases must first go through the Health and Disability Commissioner's Office and New Zealand Health Practitioners Disciplinary Tribunal (deviously set up through collusion between the Government and the New Zealand Medical Association). http://www.medlit.net/guests/bysue.htm http://www.hpdt.org.nz/Default.aspx?tabid=1

Every medical doctor in the world, by virtue of his or her membership of their National Medical Association is controlled by the World Medical Association – and takes either the Oath of Hippocrates or more recently makes a declaration based on that oath to comply with the Declaration of Geneva. Yet not one single medical professional in the world keeps these oaths at all, be they as deficient as they are. For a start, the health of the patient is not at all the doctor's first consideration – it is money.

And, "I will respect the secrets that are confided in me, even after the patient has died" is a blatant, bare-faced lie – as all doctors' now have computerized patient medical records that routinely are passed on to various government agencies and are shared with the United Nations World Health Organisation (WHO), international crime agencies etc., and absolutely

nothing is kept secret at all – once again, setting the stage for another "Nazi Euthanasia Program" and "Holocaust" – with presumably, a second "Nazi Doctors' Trial" to follow.

And do carefully note, (while many doctors will try to deny it) that every doctor in the world by virtue of his membership of the WMA now promises, through the Declaration of Geneva; *"I will maintain by all means in my power,* ***the honour and the noble traditions of the medical profession."*** These "noble traditions" to which they illusively refer are those of Hippocrates and his Hippocratic Oath through which the physician binds himself or herself to worship Apollo, Asclepius and the pagan Greek gods, personifications and incarnations of the Devil!

And woe betide any doctor who should be tempted to step out of line or depart from this strict orthodoxy for any reason. Usually the Medical Council will discipline him for small infringements, but for more serious offences and nonconformity he will immediately be struck off the register and not be allowed to practice. The truth is, now all medical doctors throughout the world are imprisoned in a powerful paradigm of evil custom and tradition enforced by the World Medical Association which controls the World Health Organization (WHO), in exactly the same way as Nazi doctors were previously controlled during WW2 in the Third Reich under Hitler.

Informed Consent

Following the Nazi Doctors' Trial, the Nuremberg Code was developed in hope to stop similar Nazi fascist medical tyranny like this ever happening again. The whole basis of it is constructed around one key, fundamental human right and democratic precept: "Informed Consent" and "absence of coercion' for all medical treatment and medical scientific experimentation.

Yet, in May 2012, the 194 Member States of the UN World Health Assembly endorsed the *Global Vaccine Action Plan 2011 – 2020* to introduce mandatory vaccination worldwide. http://www.who.int/immunization/global_vaccine_action_plan/en/

Following on from this, in 2015, on May 1st (May Day) Frederica S. Wilson (Democrat-Florida-24) presented a bill to the US House of Representatives called **H.R. 2232 – Vaccinate All Children Act 2015** – which would allow the State to require all students enrolled in all State public schools to be vaccinated in accordance with the Advisory Committee on Immunization Practices guidelines, in turn formulated under the direction of the UN World Health Organization (WHO), controlled by the World Medical Association.

The full text of the bill can be read here: https://www.congress.gov/bill/114th-congress/house-bill/2232/text More pertinent information about this evil bill is here: https://www.congress.gov/bill/114th-congress/house-bill/2232/all-info This bill is supported by the World Medical Association and American Medical Association, in other words, all doctors worldwide. While the bill does provide a medical exception for students not to be vaccinated whose health may be considered endangered by vaccination, the judgment is not at all to be made by parents or the children themselves, but only by a registered physician

conforming to the medical standards set by the World Medical Association. In other words, this is a resurrection of Nazi fascist medical coercion and practice.

If the thought of all modern doctors now turning into evil "Nazi" pathological killers or destroyers seems too difficult to believe – through the global implementation of forced, mandatory vaccinations and injections – then why not view this stunning clip on YouTube here: https://www.youtube.com/watch?v=bZLTpU0eFNE "Nazi Nuremberg War Crimes Trial: Doctor's Trial Cross-Examination of Herta Oberhauser 4-08-1947" Here, Herta Oberhauser, defendant at the Nuremberg War Crimes Doctor's Trial, is cross-examined by prosecuting attorney in Nuremberg on April 18, 1947. The witness is asked if she gave injections to patients to relieve their pain or to kill them. She received awards for her work with the sulphanilamide experiments. Another revealing YouTube documentary titled, *Science and the Swastika: The Deadly Experiment* is here: https://www.youtube.com/watch?v=FZquBH0CH24

This US "Nazi bill' (because that is what it really is) is formulated in direct contravention of the Nuremberg Code. As far as this author is aware, to date, the bill has not yet been passed due to its contentious nature. But the pressure to pass it is intense, being pushed by the bankers and big pharmaceutical companies who behind the scenes control the World Medical Association and the UN World Health Organization and in turn influence members of the United States Congress. So it is clear. If the doctors will unethically do this with vaccinations, then it follows, they will do it with just about anything else, and they most definitely are:

This same strategy in planning to remove "Informed Consent" regarding vaccinations by 2020, is now, unfortunately, also being applied to global lighting policies implementing LEDs as well, also by 2020.

Just as the world's big banks control the pharmaceutical companies and therefore the health policies of the UN WHO, so the bankers control the Global Lighting Association that is aiming to convert the whole world to LEDs by 2020 or soon thereafter, in spite of the fact the blue light hazard in white LEDs is very well known in ophthalmology to be extremely damaging to human health, and most particularly to people's eyes.

Indeed, although the thought may seem preposterous, it is quite conceivable that by about 2020 if a resident is found to have an old incandescent light bulb in his house by a "Light Bulb Gestapo" house inspector – he may end up be charged forthwith as an environmental criminal and thrown into the nearest jail for the offence, thanks to treacherous, aligned politicians.

Like the pharmaceutical companies and World Medical Association, the Global Lighting Association, through its endless committees, also sets many of the policies of the United Nations. Here are just two vivid examples showing how the Global Lighting Association deviously works through its Environmental Committee and LED Committee via the UN to implement their secret plans to convert the world to LEDs – by deliberately hiding the damaging effects of their dangerous products from the naïve general public by removing "informed consent." http://www.globallightingassociation.org/committees

Here is a splendid example showing how their corporate fascist lighting and environmental policies are being rapidly implemented through the United Nations in Japan: http://www.ledinside.com/news/2015/11/japan_to_phase_out_incandescent_and_fluoescent_lights_by_2020

LED white light is a completely DIFFERENT LIGHT compared to all incandescent light. While manufacturers may claim it is similar, they are bare-faced liars. Because it absolutely is entirely different, and contains a huge proportion of toxic blue light that is very damaging to human eyes at high intensity or long exposure.

Soon, (unless things radically change), the whole world will be covered in a huge blanket of toxic LED blue light, being blasted into the eyes of almost everyone – and no thanks to big business, optical scientists, ophthalmologists and medical eye specialists, the whole world is going to be cursed with blindness.

This may be extremely difficult to believe for many people. Why would millions of highly educated men and women, business people, doctors, scientists etc. do such a thing??? Many of these individuals have families and grandchildren as well. Why would they support such abhorrent policies that in the end are going to destroy their own progeny – their own children – their own future! It just doesn't make sense does it? But the reality is, it is happening now and it is accelerating at a frantic pace. So one may ask why? Why? How can this possibly be true?

Clearly, one of the biggest reasons is money. Even the Bible states, *"For the love of money is the root of all evil: which while some coveted after, they have erred from the faith, and pierced themselves through with many sorrows."* (1 Timothy 6:10). Another reason is the promulgation of neo-Nazi Fascism throughout the world now by Britain and the United States.

Anglo/American Neo-Nazi Fascism:

The evil reign of death and destruction perpetrated by Hitler's Nazis including the medical profession was directly inspired by Roman Fascism. In ancient Rome, it was symbolized by the FASCES, a bundle of rods bound and surmounted with an axe head, which represented the power of the Roman magistrates under the Dictator to scourge and decapitate. Very few members of the general public today realize that this was not Hitler's own invention, but was taken from early Italian, Anglo/American Fascism https://en.wikipedia.org/wiki/Fasces https://en.wikipedia.org/wiki/Fascist_symbolism Modern neo-Nazi Fascism, with its fasces symbol has its beginnings in the symbolism on the British Sovereign's Gold State Coach, where the four tritons, sons of Neptune, protect the pagan Sovereign and represent him or her as a fascist ruler. On the front of the coach are two tritons acting as heralds blowing conch-shell trumpets, and at the rear of the coach are another two tritons each carrying a Roman fasces topped with imperial tridents in place of the axe head. On the top of the coach are festoons of laurel, dedicated to Apollo. https://www.youtube.com/watch?v=YZAKKieEUbQ

Currently, not only is Queen Elizabeth II presently a Fascist ruler, under the protection of the pagan Greek god Apollo, she is also a Druid witch high priestess. Her secret initiation took place in 1946, before she even married Prince Philip and before her coronation in 1953. While masquerading under the cloak of Christianity to deceive the simple-minded, she is not a Christian by any stretch of the imagination, and deviously, is still a dedicated pagan, having never revoked this Druid initiation at all. https://www.youtube.com/watch?v=2WUtGN2rdyw https://www.youtube.com/watch?v=6ZYy9cFszRA

So why do people blindly respect her, as they do their family doctors – when the real truth is she is not the person that she outwardly claims to be with the best interests of her subjects at heart. Far from it. Isn't it about time more thinking people woke up to these glaring facts?

Copies of these two fasces on the Queen's Gold State Coach, symbol of Roman/Nazi Fascism, in turn, are now mounted on the rear wall behind the Speaker's Rostrum in the U.S. House of Representatives, symbolizing that the British Sovereign controls the US Fascist Government. https://www.youtube.com/watch?v=cCXSO-3mt51 But the fascist spiritual heart of the US Government goes much deeper. The US Capitol Building in Washington D.C., the seat of the US Government, is crowned with the Statue of Freedom, a Greco/Roman goddess supported by the Roman fasces, symbolizing the whole US Government is totally Fascist.

Here are the *official* declarations of the key fascist "Nazi" pagan symbols of the American Government in the US House of Representatives:

1. **Bronze Fasces:** http://history.house.gov/Exhibitions-and-Publications/House-Chamber/Rostrum/ Note that on these two fasces on the wall behind the Speaker's Rostrum, there is a laurel wreath draped around each of them. This is the sacred laurel wreath consecrated to Apollo. Most statues of the Greek god Apollo have this laurel wreath on his head.
2. **The Rostrum:** The Speakers Rostrum is the focal point of the Chamber of the US House of Representatives. It is walnut, and elaborately carved with five-pointed Satanic stars surrounded by laurel wreaths, all consecrated and dedicated to Apollo. http://history.house.gov/Exhibitions-and-Publications/House-Chamber/Rostrum/
3. **The Mace:** The Mace of the US House of Representatives is the supreme symbol of the power of the US Government. It is a Roman/Nazi fasces made up of 13 ebony rods, crowned by a Roman eagle, symbol of the Roman sun-god Jupiter, the Roman equivalent of Zeus, father of Apollo. http://history.house.gov/Exhibitions-and-Publications/House-Chamber/Historic_treasures/
4. **The Inkstand:** Before the Speaker calls each session of the US House of Representatives to order, a small, coin-silver inkstand is carefully placed on the Speakers Rostrum. It is the oldest relic in the House. It holds three crystal bottles of ink for the busy Speaker to sign important House of Representative documents. These three crystal bottles are contained in a silver tray, adorned on both sides with swags

and medallions with eagles, symbol of Jupiter/Zeus. The feet of the tray are Roman fasces with Asclepius's snakes winding around them.

5. http://history.house.gov/Exhibitions-and-Publications/House-Chamber/Historic_treasures/

In the most minute way, every single function of the US Government, in the finest detail possible, even down to the very "inkwell" on the Speaker's Rostrum, is entirely fascist, and is spiritually bound to the worship of Apollo and Asclepius, the very same pagan Greek gods worshipped by the world medical profession – who at the time of Christ genuine Christians believed were the personification of Satan.

United States Nazi/Fascist Police State

If the reader doubts any of these very brief, shocking facts about the current United States Government, or doubts it is not now developing into a modern Nazi/Fascist police state, then why not view Dr Rex Curry's much more extensive, simply superb research on the subject here: http://rexcurry.net/ and here: http://rexcurry.net/police-state.html

How much can I trust the government, scientific or medical profession?

Much in this little book may be difficult to believe. Not all science or medicine is bad. Not everything the government does is bad. Proper discernment is required and at times it is very difficult to achieve. But never ever think that the government, scientists or doctors are all infallible, ethical or more intelligent than anyone else. Historically, the facts often prove beyond doubt many of their actions have quite simply been downright misguided and evil.

For a brief example. Around 1000 BC in Egypt and around the time of Hippocrates in the 5th century BC in Greece "Bloodletting," or "bleeding a patient to health (death)," based on a deluded theory linked to menstruation, was the most common medical practice performed by ignorant physicians. Yet this mindless practice was continued by the world medical profession right into the 20th century. It was used to treat almost every disease, from acne, asthma, cancer, cholera, coma, diabetes, insanity, jaundice, leprosy, ophthalmia, pneumonia, scurvy, smallpox, tetanus, TB, and hundreds of other diseases. Millions unnecessarily died miserable deaths by being treated this way by these charlatans. In later times, it was carried out by barbers leading to the distinction between physicians and surgeons. The red-and-white-striped pole of the barbershop, still in use today, is derived from this deluded practice: the red symbolizes blood while the white symbolizes the bandages. Bloodletting only began to be questioned in the second half of the 1800's, yet by and large, almost unbelievably, most ordinary people still continued to blindly worship these charlatans and snake oil pushers. https://en.wikipedia.org/wiki/Bloodletting

While today, the World Medical Association, and the over 10 million medical doctors that it controls, persistently accuses Natural Health practitioners and the minority of people who, for example, claim vaccinations are dangerous and do more harm than good, are deluded

nutters or snake oil pushers – the fact is, that these same medical professional misfits, from the mid-1700s to the early 1800s, were en masse using Tobacco Smoke Enemas, commonly called in vulgar slang, "Blowing Smoke Up Your Arse" to try and resuscitate patients presumed dead. This is not just wild speculation or hearsay. It is a well-documented, historical fact.

In fact, most physicians were so deluded, they actually believed by blowing smoke up the rectum of patients the nicotine in the tobacco smoke greatly stimulated the heart to beat stronger and faster, thus encouraging respiration. In London, it was such a commonly used resuscitation method for drowning victims, the equipment used for this mindless procedure was hung alongside major waterways, including on key locations alongside the River Thames, similar to defibrillators today. http://www.vaccinationinformationnetwork.com/blowing-smoke-up-our-arses/ http://www.todayifoundout.com/index.php/2014/05/origin-expression-blow-smoke-ass/

Right up to very recent times, medical doctors were still advertising on early black and white TV ads for cigarette companies that smoking was actually good for your health. http://www.youtube.com/watch?v=gCMzjJjuxQI – while many ordinary, less formerly educated members of the general public instinctively knew tobacco smoke was bad for their health and wouldn't touch the stuff. So never ever think your highly educated university professor or family medical professional is automatically anyone special or an "expert" who possesses a level of discernment better than anyone else – because they often don't.

But at the very heart of the matter, too, (although traditionally a very unpopular and contentious subject for many) at the highest level, whether it be in the government, the scientific community or medical profession, the facts show that the foremost cause of many of these appalling actions by professionals are primarily inspired by a very definite philosophical or *spiritual* belief system, that is diametrically opposed to the teachings of the Bible. As such, in the following concluding chapter, be it as controversial as it is, the author will try to briefly summarize the two opposing belief systems, hopefully, to bring out the full truth of this historically, extremely contentious matter – and explain why both the medical profession and light bulb industry are now acting so closely in unison together – to subtly blind people through LED light – while helping to fulfil Lucifer's infamous prophetic role, as the literal "Light-bringer" precisely foretold in Isaiah 14, Luke 10:18 and in 2 Corinthians 11:14 as the angel [messenger] of light who sets forth to rapidly destroy the whole world through poisonous toxic blue light – because he now knows his time is short.

In prophetically warning about Satan during this rapidly changing, short, evil time, foreshadowing the introduction of the "mark of the beast" system for all buying and selling described in Revelation 13, John in Revelation 12:12 succinctly explained:

Therefore rejoice, ye heavens, and ye that dwell in them. Woe to the inhabiters of the earth and of the sea! ***For the devil is come down unto you****, having great wrath,* ***because he knoweth that he hath but a short time****."*

CHAPTER EIGHT

CONCLUSION:
THE WAR BETWEEN CHRIST AND LUCIFER

On the one hand, according to the Bible, the power of Christ is to bring TRUE LIGHT into the world to help people, cure blindness, and ultimately give people everlasting life.

On the other hand, Lucifer (Satan) wants to bring his poisonous ARTIFICIAL LIGHT into the world to curse people with blindness and ultimately destroy everything.

Anyone who has made a deep study of ancient Greek myth, belief and worship will know that there is a recurring theme in all of it with severe punishment administered by the gods who oppose them – BLINDNESS.

The spiritual war, therefore, is between Jesus Christ and Lucifer (Satan). According to the Bible, all good light comes from God the Father:

Father of lights

"Every good gift and perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." (James 1:17)

Christ

"For with thee is the fountain of life: in thy light shall we see light." (Psalm 36:9)

"Then spake Jesus again unto them, saying, I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." (John 8:12)

Christ's followers

"Ye are the light of the world. A city that is set on an hill cannot be hid. Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house. Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." (Matthew 5:14-16).

But unfortunately, there is a great deal of opposition to this good "light" from a certain, dark personality, called Lucifer, who masquerades as a bright, morning star and angel of light – and he doesn't like these claims of Christ one little bit at all. So what do we know about him?

Lucifer

The name "Lucifer" is the only name in the entire Bible directly connected to modern lighting and light bulbs. Here is the *only* passage in the Bible in which his name occurs:

*"How art thou fallen from heaven, O **Lucifer**, son of the morning! How art thou cut down to the ground, which did weaken the nations! For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God: I will sit on the mount of the congregation, in the sides of the north: I will ascend above the heights of the clouds; I will be like the most High. Yet thou shalt be brought down to hell, to the sides of the pit. They that see thee shall narrowly look upon thee, saying, Is this the man that made the earth to tremble, that did shake kingdoms; That made the world as a wilderness, and destroyed the cities thereof; that opened not the house of his prisoners?"* (Isaiah 14:12-17)

The word 'Lucifer' is by far the most *controversial* word in the entire KJV Bible. For centuries apostate scholars and pagans have attacked its inclusion in the KJV Bible. As the result, most modern Bible version editors have removed it from their spurious texts – so that their readers will be utterly *confused* and not be able to fully understand or largely comprehend this profound truth about LEDs with Lucifer's direct relationship with them. Now!

The KJV translators, under the inspiration of the Holy Ghost, surprisingly took the word *Lucifer* in Isaiah 14:12 not from the Hebrew word *heylel* (Strong's Hebrew #1966 'brightness') in the *Ben Chaim Masoretic Hebrew Text* as would normally have been expected, but uncharacteristically took the word from the *Latin Vulgate* translation. Now we know why!

Latin Vulgate: *"quomodo cecidisti de caelo lucifer qui mane oriebaris corruisti in terram qui vulnerabas gentes."* (Isaiah 14:12)
King James Bible: *"How art thou fallen from heaven, O Lucifer, son of the morning! How art thou cut down to the ground, which did weaken the nations!"* (Isaiah 14:12)

Even though the fifth word in the Latin text *"lucifer"* above in Isaiah 14:12 is not capitalized as a proper name in the Vulgate, and it occurs elsewhere in the Latin Vulgate in Job 11:17, Job 38:32, and 2 Peter 1:19, where the KJV translators did not follow the Vulgate – the KJV translators chose to follow the 1599 Geneva Bible to capitalize it because of the context – implying that it was not only a metaphor for the king of Babylon, but was referring to Satan.

Most spurious modern bible versions have deviously changed Lucifer as a person (Satan) in the Isaiah 14:12 text to terms like morning star, daystar, son of the dawn etc. wickedly making Lucifer the same as Jesus Christ "the **bright** and morning star" described in Revelation 22:16.

There is a special Greek word used for 'bright' in Revelation 22:16 relating to Jesus Christ. It is *lamprŏs* (Strong's Greek #2986 – magnificent, bright, clear, gay, goodly, gorgeous white) – which is entirely different to *astrapē* 'lightning' (Strong's Greek #796) in Luke 10:18, and *phōs*

'light' (Strong's Greek #5457) in 2 Corinthians 11:14 – both of which relate to Lucifer's counterfeit and destructive light. The KJV translators correctly made this subtle distinction.

The Latin word *Lucifer* comes from two Latin words *lux* 'light' and *ferous* 'to bear or carry' = literally *'Light-bringer.'* Today this Latin word ***lux,*** is *still* the official international word for the measurement of luminous light intensity **[lux]**, and is the root word for Lucifer.

In the passage in 2 Corinthians 11:14, **"And no marvel; for Satan himself is transformed into an angel of light"** – the English word 'light' here is translated from the Greek word *phōs* 'light' (Strong's Greek #5457) which is the root word of the Greek ***phosphorous*** and ***eosphoros*** the equivalent in Latin of which is ***Lucifer.*** The KJV translators rendered it in the correct context.

The Latin term, ***Phosphorus,*** comes from Greek ***Phōsphoros*** in turn a composite of the Greek roots ***phōs*** 'light' and ***phoros*** 'bringing' = "**Light-bringer."**

The term *phōsphoros* 'Light-bringer' was simply the Greek equivalent of the Roman, Latin term, *Lucifer* 'Light-bringer.' In 2 Peter 1:19, the Vulgate renders it *lucifer,* the KJV 'day star.'

Remarkably, apart from a relative minority of LEDs manufactured using the *Red-Green-Blue (RGB) System*, most LEDs today are now manufactured using what is called the *Phosphor Conversion System.* In this process, a primary compound called *Phosphorus* (the literal Greek name for the Latin term – Lucifer) is used to convert blue light into white light. In the manufacture of white LEDs, yellow or orange phosphorus [phosphor] is used to convert most of the blue light emitted from blue LEDs into white light, but the conversion process still leaves a very sharp "poisoned arrow" of blinding blue light in the spectral emissions. It is this intense, sharp spike of toxic blue light in LEDs that seriously damages the retina, leading to macular degeneration and blindness.

Not only is this conversion process made by phosphor, it is the very same word as Greek *Phosphorus* – 'Light-bringer' (in Latin, *Lucifer*) which is closely related to the Greek god, *Phoebus-Apollo* – 'The Radiant One' – the same pagan deity now worshipped by members of both the Global Lighting Association (originally called the Phoebus Cartel), and the World Medical Association.

If one carefully reads the biography of Lucifer in Isaiah chapter 14, about his enormous pride and deceptive role as the 'Light-bringer' mentioned in the New Testament – it therefore becomes plain what Lucifer is going to do in the last days, as the "LED Light-bringer."

Most particularly it involves destroying the world's cities thereof (at least in part - through saturating them with poisonous LED light) in the pivotal role light bulb manufacturers and the medical profession have together in carrying out his evil, devious work. The plan is very subtle, ingenious and crafty.

Whoever would have thought that the Devil would one day come to destroy the whole world as a deviously clever, almost imperceptible – literal "angel [messenger] of LED light?"

God's promises to Israel: The blessings and curses

In Deuteronomy chapter 28, God made some amazing promises to the nation of Israel (which Messianic Jews and Christians believe are still current today), in which he guaranteed wonderful blessings for obedience and terrible curses for disobedience. In fact, with his promises for obedience he gave his personal assurance that he would one day set Israel on high above all nations of the earth. However, if Israel were to reject his wonderful assurances, and depart and go after other pagan gods, he promised to bring a number of terrible curses upon the nation. One of those curses was physical blindness.

"The LORD will smite thee with madness, and blindness, and astonishment of heart: And thou shalt grope at noonday, as the blind gropeth in darkness, and thou shalt not prosper in thy ways: and thou shalt be only oppressed and spoiled evermore, and no man shall save thee." (Deuteronomy 28:28-29).

Much later, the prophet Zechariah predicted that this curse would not only apply to Israel, but to the Gentile nations as well, and most particularly to those people who were against Judah (Jews) and Jerusalem in the last days (which many Christians believe is beginning now) – a period after which God had re-gathered his people from the four corners of the earth to the land of Israel after their exile. During the end part of this troublesome period, Jerusalem, the capital city of Israel, he predicted, was to finally become a "cup of trembling" and "burdensome stone for all people" on earth who have turned away from God and gathered together against it. Again, one of the main features of this troublesome time was prophesied to be blindness:

"*In that day, saith the LORD, I will smite every horse with astonishment, and his rider with madness: and I will open mine eyes upon the house of Judah, and will smite every horse of the people with blindness*." (Zechariah 12:4).

In the New Testament, when Christ came into the synagogue at Nazareth on the Sabbath day, he first referred to the prophecy of himself in Isaiah:

"And there was delivered unto him the book of the prophet Esaias. And when he had opened the book, he found the place where it was written, The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, ***and recovering of sight to the blind****, to set at liberty them that are bruised, To preach the acceptable year of the Lord."* (Luke 4:17-19).

Jesus repeated this of himself, recorded in the Gospel of John:

"And Jesus said, For judgment I am come into this world, ***that they which see not might see; and they which see might be made blind.****"* (John 9:39).

"***He hath blinded their eyes,*** *and hardened their hearts;* ***that they should not see with their eyes,*** *nor understand with their heart, and be converted, and I should heal them."* (John 12:40).

The apostle Paul wrote this to the Corinthians in Greece:

"In whom the god of this world hath ***blinded*** *the minds of them which believe not, lest the light of the glorious gospel of Christ, who is the image of God, should shine unto them."* (2 Corinthians 4:4).

John, was commanded to write this to the angel of the church of the Laodiceans:

"I know thy works, that thou art neither cold nor hot: So then because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth. Because thou sayest, I am rich, and increased with goods, and have need of nothing; and knowest not that thou art wretched, and miserable, and poor, ***and blind****, and naked: I counsel thee to buy of me gold tried in the fire, that thou mayest be rich; and white raiment, that thou mayest be clothed, and that the shame of thy nakedness do not appear;* ***and anoint thine eyes with eye salve, that thou mayest see****."* (Revelation 3:14-18).

FIRST COMES SPIRITUAL BLINDNESS – THEN COMES PHYSICAL BLINDNESS

Satan is going to be diabolically cunning and deceptive

"*For there shall arise false Christs, and false prophets, and shall shew great signs and wonders; inasmuch that, if it were possible, they shall deceive the very elect*." (Matthew 24:24).

"*And then shall that Wicked be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming: Even him, whose coming is after the working of Satan with all power and signs and lying wonders, And with all deceivableness of unrighteousness in them that perish; because they received not the love of the truth, that they might be saved. And for this cause God shall send them strong delusion, that they should believe a lie: That they all might be damned who believe not the truth, but had pleasure in unrighteousness*." (2 Thessalonians 2:8-12).

The apostasy of Christianity, combined with the light bulb industry and medical profession's continual, obstinate worship of the Greek god Phoebus-Apollo (*Apollyon* – 'Destroyer') has a huge part to play in the last day's apocalypse period in fulfilling Satan's final death-bringing role as the deceptive global "angel of light" and "angel of the bottomless pit." Indeed, Isaiah, Luke, Paul, and John (in Revelation 9), directly use Phoebus-Apollo's and Lucifer's chief role in the Greek/Roman myths to vividly describe him.

Today, are not the world medical professionals, with their many poisonous vaccines, medicines, drugs and treatments, the modern medical emissaries of the ancient Greek deity Apollo? – the greatly loved god who cunningly mediated through his deceptive, serpentine son, Asclepius – to be naively worshipped and respected by the public masses as the great physician, god of light, medicine and healing – yet who paradoxically ended up fraudulently deceiving everybody – by surreptitiously causing the very debilitating diseases, ill-health, plague and blindness he claimed his therapeutic practices were designed to prevent.

"*And no marvel;* ***for Satan himself is transformed into an angel of light. Therefore it is no great thing if his ministers also be transformed as the ministers of righteousness;*** *whose end shall be according to their works*." (2 Corinthians 11:14-15).

"And I saw a star fall from heaven" (Rev.9:1), ***"How art thou fallen from heaven, O Lucifer,"*** (Isaiah 14:12), ***"I beheld Satan as lightning fall from heaven"*** (Luke 10:18), ***"And no marvel; for Satan himself is transformed into an angel of light"*** (2 Cor.11:14) ***"…and to him was given the key of the bottomless pit."*** (Rev.9:1).

These particular verses in Isaiah 14:12, Luke 10:18 and 2 Corinthians 11:14 all relate to Lucifer and Satan as an "angel of light" and are *literally* being fulfilled today by all people possessed by the Devil, not the least of whom are members of the world's leading light bulb manufacturers, pharmaceutical companies, and most medical doctors.

For the past nearly 2000 years, many Bible scholars thought that all these scriptures in the New Testament about *Lucifer* as the "Light-bringer" connected to Isaiah 14 were only largely "symbolical." Now we know much better. The real truth is these scriptures are totally literal.

In John 10:10, Christ solemnly warned his disciples:

"The thief cometh not, but for to steal, and to kill, and to destroy…"

… And now, is it not? – on a global scale – Lucifer, himself, the literal "Light-bringer" – "angel and messenger of light" – through his demonic agents, the global light bulb manufacturers, with their *transformation* of the whole world to LED lighting – and the world medical profession, disguised as "ministers of righteousness" – deviously using their new, incredibly destructive slit lamps and ophthalmoscopes, illuminated by enormously damaging LEDs – that are about to subtly rob billions of people of their precious eyesight.

While still, at the same time – they contemptuously have the cheek, to claim to care for the best interests of their patients in healing them, just like Apollo and his son Asclepius – the duplicitous Greek gods of medicine and healing – who, with their poisoned arrows of sharp, scorching, bright light – ended up treacherously blinding all their enemies and their patients.

oooOooo
